PURPOSE

This document provides guidance on how to estimate costs for civilians, contractors, and military personnel for Cost Benefit Analyses (CBAs) following Department of Defense Instruction (DODI) 7041.04. Since there is already a U.S. Army Cost Benefit Analysis Guide available at the Performance Portal <https://cpp.cave.army.mil> under the Cost Benefit Analysis information section of the Knowledge Center and since tutorials for both AMCOS Lite and Project Manager are available under Help Docs section on the AMCOS website, **this document will be used on CBAs that require AMCOS plus additional information not included in AMCOS.**

TOOLS FOR COSTING PERSONNEL IN AMCOS

The Army Military-Civilian Cost System (AMCOS) (see Figure 1 below) provides costs for all personnel categories. To access AMCOS go to <https://www.cave.army.mil/> and click "I Accept", then select AMCOS on the O&S WEB page. Click on the menu bar titled "Applications" to see the available costing applications.

AMCOS LITE

AMCOS Lite is a quick and simple way to retrieve cost factors for specific types of military, civilian or contractor personnel. AMCOS Lite displays costs for each grade, appropriation and cost element. Users can tailor costs for specific career elements [i.e. Military Occupational Specialty (MOS) / Area of Concentration (AOC) / Occupational Series). AMCOS Lite now provides costs in constant and then year dollars based on the target year.

PROJECT MANAGER (PM)

Project Manager (PM) can cost multiple positions simultaneously. It can cost soldiers, civilians, and contractors for any rank or grade or any occupation. PM will automatically update when AMCOS is updated, and will apply inflation in /Then- Year dollars across the POM.

PAY PLAN XWALK

Pay Plan Xwalk is a tool that helps analysts determine if it will cost more, less, or the same to use soldiers, civilians, or contractors to perform Army work.

CIVILIAN PERMANENT CHANGE OF STATION (PCS)

Civilian PCS is a tool that estimates the cost of civilian moves. This is not the official Army tool used for civilian reimbursement. The purpose of the tool is for Army analysts to use it in "what if" cost drills usually before it is confirmed one civilian or multiple civilians will actually move.

OTHER RESOURCES FOR PERSONNEL COST DATA

JOINT INFLATION CALCULATOR (JIC)

Joint Inflation Calculator (JIC) provides inflation and escalation rates, and converts estimates from constant to constant, constant to then-year, or then-year to then-year dollars, and then-year to constant from one year to another. OSD guidance advises DoD employees to use price escalation or de-escalation for civilian pay, military pay, and fuel instead of inflation. Price escalation is an increase or decrease of a good or service or a particular set of goods or services. It reflects the real price change of the good or service. JIC is found at <https://www.asafm.army.mil/References/> under **Cost Materials**, then **Cost Models** then **Rates and Guidance** at the bottom of the page.

AMCOS Lite provides costs for one year in then-year dollars as the default. In the Spring of 2018, an inflation feature was added, based on the JIC, that can convert the default dollars to constant or then-year dollars for the years of the estimate. Project Manager provides escalation/inflation assistance across multiple years but only provides output in then-year dollars based on the JIC factors. If analysts need to convert from then-year dollars to constant dollars, they can do so using the Joint Inflation Calculator (JIC).

Please note, that the Army has not yet implemented OSD CAPE's latest guidance in, [Inflation and Escalation Best Practices for Cost Analysis](#).

DEPARTMENT OF DEFENSE (DOD MILITARY PERSONNEL COMPOSITE STANDARD PAY AND REIMBURSEMENT RATES)

Department of Defense (DoD Military Personnel Composite Standard Pay and Reimbursement Rates can be obtained at <http://comptroller.defense.gov/>. Under the Quick Links section, select "DoD Reimbursable Rates", select the desired "Fiscal Year", and select "Military Personnel Composite Standard Pay and Reimbursement Rates" (Tab K). The Army and OSD uses these rates to develop budgeting and programming estimates. **These rates should not be used for costing purposes in most situations because they do not capture full personnel costs, as indicated in DoDI 7041.04.**

OSD CAPE'S FULL COST OF MANPOWER MODEL (FCOM)

Despite DoD's information systems operating in the cloud or being moved to the cloud, system outages seem to be more common than in the past. If AMCOS would be offline for some reason, users could come up with single or multiple estimates for soldier, civilian, and contractor costs using FCoM. AMCOS functions not available in FCoM follow: drilling estimates for National Guard and Reserve Soldiers, detailed Army training costs, weapon system training costs, civilian Permanent Change of Station (PCS) costs, Xwalk tool to convert from one form of manpower (soldier, civilian, contractor) to another. Users can access FCoM at <https://fcom.cape.osd.mil/user/default.aspx>.

THE ARMY CIVILIAN PAY RATES

The Army Civilian Pay Rates can be found at <https://www.asafm.army.mil/Cost-Materials/Army-Civilian-Pay-Rates/>. OSD and the Army use these rates for budgeting and programming purposes. In general, these rates are not meant for cost analysis. **However, the Army uses them for costing Local Nationals in CBAs if no better data is available.** Local National data (also called Foreign National data) is often difficult to obtain.

PROGRAMMING AND BUDGETING ESTIMATES VERSUS COST ESTIMATES

Use of AMCOS and other cost data will vary, depending on the purpose of the estimate.

If developing programming and budgeting estimates, use the DoD Military Personnel rates and Army Civilian Pay rates methodologies mentioned on the previous pages. **AMCOS rates can also be used, but only include Army costs, and not the DoD and Federal Costs if using AMCOS for budgeting and POM purposes.** Including DoD and Federal costs could lead to over-funding programs. In addition, Army action officers should use then-year dollars for programming and budgeting estimates. Cost analysis best practices generally include estimates in both constant and then-year dollars. For cost analysis purposes, AMCOS provides total costs that include Army, DoD, and Federal costs.

COSTING OCONUS CIVILIANS IN AMCOS LITE AND PROJECT MANAGER

OCONUS civilians have now been added to AMCOS Lite and Project Manager so it is no longer necessary to use additional instructions in this CBA Guide to cost them.

USING AMCOS LITE & PROJECT MANAGER TO COST CIVILIANS DEPLOYED TO WAR ZONES

General Overview: Deployed civilians will get paid more than those not deployed and the pay will vary based on the circumstances of the deployment. Costing these civilians with AMCOS Lite or Project Manager requires replacing costs in AMCOS as well as adding costs not included in AMCOS. **CAUTION: This area is complex to cost.** Additionally, policy for this area changes frequently. The guidance below just provides a template. However, to accurately cost this area you will need to contact the Army's Civilian Expeditionary Workforce. To contact the Army's Civilian Expeditionary Workforce go to the <https://www.milsuite.mil/book/community/spaces/civ-hr/overview> then select the tab for the Army Expeditionary Civilian Workforce. That will get you to an APAN site. Create an account. Once you log in to the APAN site then you must sign up for membership in the AG-1 CP Benefits Compensation Deployments Community in order to access policy and information.

ADAPTING FOR AMCOS:

Hours

On the OPM website to calculate many of the pays below, OPM divides the annual rate of basic pay by 2087 hours. GFEBS shows 2080 hours. The examples included will use 2080 hours as we used GFEBS to calculate them.

Leave in Locality Pay

Unlike civilians doing a tour in Germany or Korea, deployed civilians retain their locality pay.

Remove Compensation Other

Includes Sunday pay (6100.11F), night differential pay, standby pay, Title 38 medical premium pay, supervisory differential, remote worksite, physician's comparability, and foreign language pay.

Replace Overtime Pay (6100.11D0):

GS-10, Step 1 Employees and Below: The overtime hourly rate is the employee's hourly rate of basic pay multiplied by **1.5**. **Basic pay includes locality pay or special rate supplements.**

GS-10 Step 1 Employees Above: The overtime rate is the greater of (1) the hourly rate of basic pay for GS-10, Step 1, multiplied by 1.5, or (2) the employee's hourly rate of basic pay.

Wage Employees: These employees are not impacted by overtime pay limitation which affects employees above GS-10, Step 1.

Biweekly Pay Limitation Overtime: Under 5 U.S.C. 5547(a) and 5 CFR 550.105, premium pay cannot be paid to General Schedule employees (including law enforcement officers and other covered employees) to the extent that doing so would cause an employee's basic pay, overtime pay, the dollar value of compensatory time off, night pay, annual premium pay, Sunday premium pay, and holiday premium pay to exceed the greater of the biweekly rate for (1) GS-15, step 10 (including any applicable special salary rate or locality rate of pay); or (2) level V of the Executive Schedule. **However, according to CENTCOM, civilians deployed to South West Asia should have their biweekly pay cap waived for the duration of their deployment.** [Pay Administration \(opm.gov\) https://www.opm.gov/policy-data-oversight/pay-leave/pay-administration/#url=Biweekly-Pay-Caps](https://www.opm.gov/policy-data-oversight/pay-leave/pay-administration/#url=Biweekly-Pay-Caps)

Remove Holiday Pay

The holiday pay will be higher for most deployed civilians than what AMCOS Lite reports for non-deployed civilians. Users will need to replace the AMCOS Lite holiday pay with a holiday pay for deployed civilians. For each hour of holiday work, employees receive holiday premium pay. **Holiday premium pay is equal to an employee's rate of basic pay.** Employees who are required to work on a holiday receive their rate of basic pay, plus holiday premium pay, for each hour of holiday work. (See 5 U.S.C. 5546(b).)

<https://www.opm.gov/policy-data-oversight/pay-leave/pay-administration/fact-sheets/holidays-work-schedules-and-pay>

Add Sunday Pay (6100.11F0)

An employee is entitled to Sunday premium pay equal to **25 percent** of his or her rate of **basic pay** for each hour of Sunday work. Sunday work consists of non-overtime work. (<https://www.opm.gov/policy-data-oversight/pay-leave/pay-administration/fact-sheets/sunday-premium-pay/>)

Add Night Pay (6100.11G0)

Night pay is a **10 percent** differential paid to an employee for regularly scheduled work performed at night. It is computed as a percentage of the employee's rate of **basic pay (including any applicable locality payment or special rate supplement)**. Generally, night work must be performed between the hours of 6 p.m. and 6 a.m. (<https://www.opm.gov/policy-data-oversight/pay-leave/pay-administration/fact-sheets/night-pay-for-general-schedule-employees/>)

Add Overseas Differential Pay (6100.11J0)

Look up the Post (Hardship) Differential on the U.S. Department of State website, (<https://aoprals.state.gov/Web920/hardship.asp>). Right now, Israel gets between 10-15%Ukraine gets 20%. This pay starts upon arrival for permanently assigned personnel and after 42 days in country for those temporarily assigned from the United States or another county. It is paid as a percentage of basic compensation. <https://www.dfas.mil/civilianemployees/understandingyourcivilianpay/theaterentitlements.html> <https://www.opm.gov/faqs/topic/payleave/index.aspx?cid=c4c7e7ca-48be-4650-bbc8-6ec08e8fd479&page=2>

Add Overseas Allowance

If the civilian is assigned to the Post as a Permanent Duty Station, add overseas allowance. This would be equivalent to Post Allowance/and other overseas allowances.

Add Danger Pay if applicable

Currently, Danger pay for Afghanistan and Ukraine is 35% of basic compensation while Kuwait does not receive danger pay at this time (https://aoprals.state.gov/Web920/danger_pay_all.asp). Danger pay starts the first day after 4 hours. (www.dfas.mil). Danger Pay in GFEBS is found under Hazardous Duty Pay (6100.11H0). To be sure to pull the right data in GFEBS BOBJpull the GRC Type Hour Code field (YR).

Add Imminent Danger Pay if applicable

Analysts may need to add imminent danger pay if costing deployed civilians. This pay is now calculated as a daily rate and paid monthly. The full monthly rate is \$225. The daily rate is \$7.50. Employees cannot receive Imminent Danger Pay and Post Differential at the same time. Civilians are entitled to Imminent Danger Pay during the 42-day eligibility period for Post Differential. Check the Financial Management Regulation Volume 7A, Chapter 10, Figure 10.1 for a list of areas receiving Imminent Danger Pay. (At this time, civilians deployed to Kuwait are not receiving imminent danger pay).

Add PCS Relocation Bonus if applicable (6100.12A6)

A relocation incentive may not exceed **25 percent** of the employee's annual rate of **basic pay** in effect at the beginning of the service period multiplied by the number of years (including fractions of a year) in the service period (not to exceed 4 years). With OPM approval, this cap may be raised to **50 percent** (based on a critical agency need), as long as the total incentive does not exceed 100 percent of the employee's annual rate of basic pay at the beginning of the service period. (See 5 CFR 575.209.) The incentive may be paid as an initial lump-sum payment at the beginning of the service period, in installments throughout the service period, as a final lump-sum payment upon completion of the service period, or in a combination of these methods. The agency may not pay a relocation incentive until the employee establishes a residence in the new geographic area. For this payment, basic pay **includes locality and similar payments** but excludes additional pay of any kind, subject to Aggregate Pay Limitation 5 CFR part 530, subpart B. This payment is also subject to a service agreement (<https://www.opm.gov/policy-data-oversight/pay-leave/recruitment-relocation-retention-incentives/fact-sheets/relocation-incentives/>).

Annual Premium Pay Limitation (APPL)

Deployed civilians are limited on the pay that they can earn in a given calendar year. This limitation ONLY applies to the pays in Table 2 below:

Locality Pay	Compensatory Time	Sunday Pay
--------------	-------------------	------------

Overtime	Night Pay	Holiday Pay
----------	-----------	-------------

Table 2: Annual Premium Pay Limitation Cost Elements

If these pays exceed the Vice President's salary (**\$284,600 in 2024**), the employee will forfeit them. If payments in a calendar year exceed this amount, civilians are indebted to the federal government and will receive a debt letter. Deployed civilians can exceed the Vice Presidential salary for award, post differential and danger pay under this limitation. For more information, go to <https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/pay-executive-order-2024-adjustments-of-certain-rates-of-pay.pdf>

Aggregate Pay Limitation (APL)

For designated CENTCOM areas in 2021, deployed civilians were receiving unlimited pay after being in theater 42 consecutive days. APL applies to regular, overtime, night, Sunday, holiday, post differential, danger, incentive and awards pay. <https://www.dcpas.osd.mil/sites/default/files/2021-07/45.%20Calendar%20Year%202021%20Wavier%20of%20Annual%20Pay%20Limitations%20for%20Certain%20Employees.pdf>

USING AMCOS LITE TO COST SOLDIERS

AMCOS Lite and Project Manager started including cost by Installation, Housing Allowance and OCONUS locations after the 2020 Spring Update. However, there are still a few areas that require extra attention such as costing active deployed soldiers, deployed Army National Guard and Reserve soldiers and Full time Army Guard Reserve soldiers. These areas will require using AMCOS Lite and Project Manager and then adjusting the outputs to better account for specific situations.

COSTING ACTIVE COMPONENT SOLDIERS DEPLOYED TO WAR ZONES

When costing deployed soldiers, include regular CONUS costs and **research** whether the additional cost elements below apply to your estimate. Assume most deployed soldiers will continue to draw Basic Allowance for Housing when they deploy from the continental United States. Assume soldiers deploying from overseas locations or who have dependents in overseas locations will continue to draw Overseas Housing Allowance.

- Assignment Incentive Pay: This pay is capped by OSD at \$1,500 per month in the Financial Management (FMR) Regulation. However, the maximum amount of all Assignment Incentive and Special Duty Pay types is \$3,500 in DoDI 1340.26. The law (37 USC 352) allows for a cap of \$5,000. Assignment Incentive Military Pay is taxable unless in a combat zone.
- Family Separation Allowance: \$250 per month (<https://www.dfas.mil>)
- Hardship Duty Pay - Location (HDP-L), Hardship Duty Pay - Mission (HDP-M) and Hardship Duty Pay - Tempo (HDP-T). The maximum amount may not exceed \$325 in a one month period. Members getting concurrent HDP-L, HDP-M, and HDP-T may not exceed \$1,500 per month per the FMR.
- Hostile Fire Pay or Imminent Danger Pay: Maximum monthly rate = \$225 month maximum. Soldiers may only receive one of these types of pay at any time (<https://www.dfas.mil>)
- Overseas Extension Pay: Maximum Amount \$80 per month or \$2,000 per year (DoDI 1340.26).
- Special Duty Assignment Pay: Maximum Amount \$750 per month (DoDI 1340.26.)

COSTING NATIONAL GUARD AND RESERVE DRILLING SOLDIERS

Users cost these soldiers by selecting the appropriate pay plan in AMCOS Lite and AMCOS Project Manager the same way they do for Active Duty personnel only the pay plan names differ. **Users will notice the costs are much lower for these soldiers than for active soldiers. That is because these soldiers are part time, most participating in weekend drill once per month and two weeks of training each year.** Some of the cost element names differ from the cost elements in the active component. However, overall, there is not much difference in pulling costs for drilling Reserve Component soldiers than in pulling costs for active soldiers. **These soldiers may also be referred to as M-day (man-day) soldiers or weekend soldiers as well as drilling soldiers.**

COSTING NATIONAL GUARD AND RESERVE DEPLOYED SOLDIERS OR ARMY GUARD RESERVE SOLDIERS (AGR)

When costing National Guard and Reserve deployed soldiers like Active Army, analysts should note that there are differences that they are ignoring. Health care costs, retirement, and base pay do differ at this time when costing Active versus National Guard and Reserve Component soldiers. However, for most estimating purposes costing deployed Reserve Component soldiers as Active Component soldiers is reasonable.

The Reserve Component soldiers tend to have more Years of Service that will increase their base pay. The health and dental coverage for Reserve Component soldiers become the same as for Active Component members after 30 consecutive days on Active Duty. The retirement of the Reserve Component and Active Component soldiers differ. Reserve Component soldiers are generally not eligible for Reserve (non-regular) retired pay until the age of 60. However, any member of the Ready Reserve who, after January 28, 2008, is recalled to Active Duty or, in response to a national emergency, shall have the age 60 requirement reduced by 3 months for each cumulative period of 90 days so performed in any fiscal year (this qualifying service must occur after January 28, 2008). In general, the age criteria does not apply to Active Duty soldiers.

USING AMCOS LITE AND PROJECT MANAGER TO COST CONTRACTORS

Whenever possible, obtain a copy of the current or most recent contract to cost contractors for CBAs. If that is not possible, users can obtain contractor costs (obtained using Bureau of Labor Statistics percentile wage estimates) from AMCOS Contractor Cost Element (CCE). The AMCOS costs will be for specific US metropolitan areas. DASA-CE uses annual pay / hourly pay to obtain the number of hours (typically **2080** but may vary depending on the workdays in any given year) to adjust the annualized data we pull from the Bureau of Labor Statistics.

Contractor costs from CCE may vary greatly when compared to cost estimates obtained from a current or recent contract. CCE use is most appropriate when a CBA analyst must cost contractors in the absence of recent actual or similar contract(s) to use. Other methods to try to obtain contractor costs are the General Services Administration (GSA) eLibrary <https://www.gsaelibrary.gsa.gov/> The FCoM model [provides a good tutorial under their contractor tab on how to properly use the GSA eLibrary](#)

Using AMCOS Lite to estimate contractor costs entails the user supplying an overhead amount from 0-200. There is a Grant Thornton survey from 2017 that came up with wrap rates that can be used to come up with overhead if the user does not have access to a current or similar contract to pull overhead rates from. The table below provides a summary of the data from the Grant Thornton survey (<https://www.grantthornton.com/-/media/content-page-files/public-sector/pdfs/surveys/2018/2017-government-contractor-survey.ashx>).

	Wrap Rate	Fringe Benefits	Overhead Rate	G&A	MH
Company Site					
Min	1.47			5%	2%
Avg/Median	2.1 (avg)	36% (median)	50% (median)	13% (TCI) / 15% VAC	3.8% (median)
Max	3			30%	9%
Client Site					
Min	1.4			5%	2%
Avg	1.9 (avg)	36% (median)	33% (median)	13% (TCI) / 15% VAC	3.8% (median)
Max	2.3			30%	9%

Overhead can be derived from the wrap rate in the survey. Fringe is equivalent to benefits in AMCOS. AMCOS obtains our Avg Cost of Benefits from the Bureau of Labor Statistics (BLS), which is 30% as of 2023. Compare the BLS ACoB (30%) to the GT survey of 36%. Using some math one could back into what a reasonable overhead number is to use:

Company site: $(1\$ (\text{salary}) * X) + 1.3 (\text{Fringe}) = 2.1$; $X =$ **an Overhead of 80%**

Client site: $(1\$ (\text{salary}) * X) + 1.3 (\text{Fringe}) = 1.9$; $X =$ **an Overhead of 60%**

Both of the above use the average wrap rate but it could be repeated with the min/max.

Costing contractors using AMCOS Lite is very similar to costing civilians and soldiers. Figure 1 shows a run of AMCOS Lite costing contract lawyers.

Figure 1: Costing contractors in AMCOS Lite

Table 3 explains the selections in the drop-down menu for costing contractors. Users first select Contractor Cost Estimate at the pay plan drop-down menu. Next, users choose an occupation from the SOC Major Group such as Legal Occupations. After selecting Legal Occupations, in the Detailed Occupation drop down below

there are many selections: lawyers, court reporters, judges, judicial law clerks and more to select. Users can take into account U.S. locations using the Area drop-down list.

AMCOS Menu	U.S. Metropolitan Area Contractor Costs
Pay Plan	Contractor Cost Estimate (CCE)
Category	Lawyers
Location	Washington-Arlington-Alexandria, DC-VA- MD-WV
Overhead Percentage	Enter a number between 0-200%
Inflation	Select appropriate inflation model, Then-Year to Then-Year or Then-Year to Constant Dollars
Output/Target Year	Select appropriate target year for projecting costs
Summary	Default

Table 3: AMCOS Lite Drop Down Menus for Contractors

USING AMCOS'S PAY PLAN XWALK TO COMPARE COSTS OF SOLDIERS, CIVILIANS, AND CONTRACTORS

From time to time, Army leadership will want to know what the costing differences are between soldiers, civilians and contractors. For example, let us say we are working on a CBA where leadership wants to see how much it would cost to replace civilian and military Operations Research Analysts (ORSAs) with contractors. The first step would be to type in Operations Research Analyst in the Origination Subgroup box. All three types of Operations Research analysts appear (contract, civilian and military. In this example, since we are seeking contractors as our end product, we select the contract manpower type. Next, the user needs to decide the level of experience or grade equivalent. In this example, we are looking for entry level ORSAs and will chose those at the 25th percentile. All the matches across the Army will show up. If there are pay plans you are not interested in, you can delete them from the visualization. We will next need to select a location. For this exercise, select Aberdeen Proving Ground. After this step, the user will want to select Tabular/Export to refine the matches. Some of the matches will be loose such as a statistician or data scientist. If you only want an exact match, you can delete the less specific matches. One note of caution would be for the analyst to remember to always use actual contract costs if they are available

Figure 2: AMCOS Pay Plan Xwalk for Operations Research Analysts

Figure 2 is an example of an analysis comparing costs of ORSAs using military, civilians, and contractors. The user selects the Origination Subgroup, Pay Plan and Level and Location and then Tabular/Export.

The screenshot shows the AMCOS Pay Plan Xwalk interface. The left sidebar contains steps for selecting a pay plan and location. The main area displays a table of results under the 'Tabular / Export' tab. The table lists various pay plans, group codes, group descriptions, subgroup codes, subgroup descriptions, dependency status, and grade levels. The results are filtered for Operations Research Analysts at the 25th percentile.

Pay Plan	Group Code	Group Description	Subgr... Code	Subgroup Description	Depen... Status	Grade Level
CCE	13-1000	Business Operations Specialists	13-1081	Logisticians	-1	50th
CCE	13-1000	Business Operations Specialists	13-1081	Logisticians	-1	75th
CCE	13-1000	Business Operations Specialists	13-1081	Logisticians	-1	90th
CCE	15-2000	Mathematical Science Occupations	15-2031	Operations Research Analysts	-1	10th
CCE	15-2000	Mathematical Science Occupations	15-2031	Operations Research Analysts	-1	25th
CCE	15-2000	Mathematical Science Occupations	15-2031	Operations Research Analysts	-1	50th
CCE	15-2000	Mathematical Science Occupations	15-2031	Operations Research Analysts	-1	75th
CCE	15-2000	Mathematical Science Occupations	15-2031	Operations Research Analysts	-1	90th
CCE	15-2000	Mathematical Science Occupations	15-2041	Statisticians	-1	10th
CCE	15-2000	Mathematical Science Occupations	15-2041	Statisticians	-1	25th
CCE	15-2000	Mathematical Science Occupations	15-2041	Statisticians	-1	50th
CCE	15-2000	Mathematical Science Occupations	15-2041	Statisticians	-1	75th

COSTING A PORTION OF A TDA MILITARY MEMBER OR CIVILIAN'S TIME

To calculate the cost of an activity an employee is performing and there is a requirement to include leave and training time as a cost of that activity, divide the annual pay by **1740** hours to obtain an hourly rate. Then, multiply the hours spent (for example, writing appraisals 40 hours per year) by the hourly number calculated. If leave and training are not required, divide by 2087 hours to get an hourly rate and multiply that rate by the 40 hours needed to write appraisals. (**Caution**, the hours per year changes. If using this information to estimate a cost avoidance, 2,087 hours should be sufficient. If the estimate needs to be more exact, calculate the hours per year using the NETWORKDAYS (Start Date, End Date)) formula in Table 5 below.

Formula: = NETWORKDAYS(Start Date, End Date)

WORK DAYS & COMPENSABLE HOURS				
Fiscal Year	Start Date	End Date	Work Days	Compensable Hours
FY 23	10/1/2022	9/30/2023	260	2080
FY 24	10/1/2023	9/30/2024	261	2088
FY 25	10/1/2024	9/30/2025	261	2088
FY 26	10/1/2025	9/30/2026	261	2088

Table 4: NETWORKDAYS formula example
