INTRODUCTION - MILITARY

GENERAL INFORMATION

This section addresses the Military (Active, National Guard (NG), and Reserve) cost elements used within AMCOS. Each cost element is associated with a Category, Appropriation (APPN), Description, Business Logic, Basis of Computation, and Source from which the calculation obtained data for its computation of costs.

AMCOS LITE, Project Manager, and Xwalk application modules have a standard set of cost values for each pay plan and AMCOS refers to them as the Default Summary costs. These Default Summary costs provide the same cost results across all three application modules and serve as input for Cost Benefit Analysis (CBA) cost estimation.

For the nine military pay plans, there are several cost summary views (detailed below). Each summary presents a different view of a position's costs, and the appearance of the cost table generated will be different as discussed briefly below:

- **The Default Summary is a standard set of cost elements for a specific pay plan. AMCOS LITE cost values will match the corresponding cost element value in the other two modules, AMCOS Project Manager, and Xwalk.**
- **The Training Summary is a subset of the Default Summary that focuses on training elements only.**
- **The Weapon Systems Manpower Summary is the Default Summary modified to include additional detail such as the Army Cost Element Structure (CES), The Office of the Secretary of Defense (OSD) Office of Cost Assessment and Program Evaluation (CAPE) CES, and the Weapon System Specific costs by Weapon System.**
- **The Detail Summary includes all child CEs not shown in the default summary, thus providing additional details.**
- **The Ancillary Summary provides supporting data used in the calculation of certain cost elements which can be used to conduct different cost allocation scenarios.**

Throughout this document, use the following Pay Plan and Appropriation (APPN) acronyms listed below:

PAY PLANS ACRONYMS

AE	Active Enlisted
AO	Active Officer
AWO	Active Warrant Officer
NE	National Guard Enlisted
NO	National Guard Officer
NWO	National Guard Warrant Officer
RE	Reserve Enlisted
RO	Reserve Officer
RWO	Reserve Officer Warrant Officer

APPROPRIATIONS (APPN) ACRONYMS

MPA	Military Personnel Army
MPA non-pay	Military Personnel Army Non-Pay
NGPA	Military Personnel Army National Guard
RPA	Military Personnel Army Reserve
OMA	Operations and Maintenance Army
OMNGA	Operations and Maintenance National Guard
OMAR	Operations and Maintenance Reserve
OMDW	Operations and Maintenance Defense-wide
Federal OM	Operations and Maintenance Federal
OMA_1	Cost derived from the TRADOC-159 report which does not identify or segment by APPN. So, assumed to be OMA-funded

ASSOCIATION OF APPN TO AMCOS CATEGORIES

The charts below illustrate the association of the Active Enlisted, Officer, Warrant Officer, National Guard & Reserve Enlisted, and National Guard & Reserve Officer pay plans to their respective Categories and APPNs mentioned above.

Active Enlisted						
Categories	APPN					
	MPA	MPA Non-Pay	OMA	OMA_1	OMDW	Federal OM
Medical Support Costs					X	
Military Compensation	X					
Morale, Welfare and Recreation Costs			X			
Other Benefits	X				X	X

ASSOCIATION OF CE TO AMCOS SUMMARIES

AMCOS contains five summaries:

- Default – standard list of Cost Elements (CEs)
- Detailed – additional cost elements below the default level
- Training – training cost elements only below the default level
- Weapon System Manpower – detail at the weapon system level
- Ancillary – additional cost elements not otherwise part of any of the summaries above

The additional elements provided in the detailed summary are below:

- Other Benefits
 - Avg Cost of Clothing Allowance
 - Avg Cost of FICA
 - Avg Fixed Cost of GI Bill
 - Avg Fixed Cost of Student Loan Repayment Program
 - Avg Cost of Miscellaneous
 - Avg Cost of Survivor Benefits
 - Disability, Hospitalization & Death Gratuities
- Separation Costs
 - Avg Cost of Accrued Leave and Separation
 - Avg Cost of Full Involuntary Separation Incentives
 - Avg Cost Separation Moves – Annualized
- Special Pays
 - Avg Cost of Aviation Career Incentive Pay
 - Avg Cost of Board-Certified Pay
 - Avg Cost of Career Sea Pay
 - Avg Cost of Consolidated Special Pays
 - Avg Cost of Diving Duty Pay
 - Avg Cost of Foreign Duty Pay
 - Avg Cost of Foreign Language Pay
 - Avg Cost of Hardship Duty Pay
 - Avg Cost of Hazardous Duty Pay
 - Avg Cost of Hostile Fire and Imminent Danger Pay
 - Avg Cost of Incapacitation PayAvg Cost of Special Duty Pay

- Training Costs
 - Avg Cost of Basic Training
 - Avg Cost of Career Training
 - Avg Cost of General Training
 - Avg Cost of Initial Entry Training
 - Avg Cost of Advanced Individual Training (AIT)
 - Avg Cost of Officer's Undergraduate Pilot Training
 - Avg Cost of One Station Unit Training
 - Avg Cost of Other Flight Training
 - Avg Cost of Professional Training
 - Avg Cost of Weapon Specific Training

MILITARY

COST ALLOCATION METHODOLOGIES

PAY PLAN ALLOCATION (PPA)

PPA is the process of taking total costs for either a pay plan or component and allocating that cost evenly for every position. An example of this allocation methodology is recruiting costs. Every Active Enlisted Servicemember benefits from the Army's recruiting expenditures. The cost calculation is thus: *Total Cost / Inventory = PPA Cost allocation per Soldier*

CROSS GRADE LEVEL ALLOCATION (CGLA)

CGLA recognizes that the costs expended within a certain grade level benefit the subsequent grade levels. An example of this allocation methodology is Selective Retention Bonus (SRB). SRB entices a Servicemember to continue their service with the Army for a specified length of time. The Army realizes the benefits of the SRB cost in each grade level thereafter. The cost calculation is thus: *Sum(SRB @ GL & Subgroup) / (Inventory for that GL, and all subsequent GLs, for that subgroup)*. CGLA also allocates the cost for Enlisted subgroups to their 'parents.' This allows AMCOS to recognize costs through the entire career progression even if the actual MOS changes as the grade level increases. The figure below displays a visual of how CGLA works. In the figure 'N' represents however many grade levels there are which varies depending on the selected grade and MOS/AOC/WOMOS.

AVERAGING

The most common calculation method utilized by AMCOS is averaging. That may include computing a weighted average based on inventory data, or an allocation based on an average percentage. An example of this is the Avg Cost of Base Pay, which is the pay for each Grade Level and Years of Service divided by the corresponding amount of inventory.

CATEGORY – ALLOWANCES

AVG COST OF FAMILY SEPARATION PAY

Description

When Enlisted, Officers, and Warrant Officers who are stationed either PCS or TDY for over 30 days living separate from their families, this allowance is paid. This pay is only for soldiers with dependents.

Business Logic

This pay goes to those overseas under PCS orders that do not allow dependents requiring the soldier to maintain two homes. Calculate the percentage of soldiers with dependents per rank by dividing the number of soldiers with dependents by the total number of soldiers. Multiply this percentage by the cost per person for the entire Army. Calculate the cost per person by dividing the total payments for family separation pay by the number of soldiers with dependents. Add that result to the PCS cost per person for each rank to come up with the average cost of family separation pay for each rank.

Basis of Computation

Enlisted Displayed Value:

$$\frac{(\text{Percent with Dependents} * \text{Projected Inventory})}{\text{Total Inventory}} * (\text{PCS Overseas 30 days dependent not Authorized} + \text{TDY Overseas 30 days dependent not nearby}) / (\text{SUM of all ranks} (\text{Percent with Dependents})) + \text{PCS Budget} / \text{Total Inventory}$$

Officer/Warrant Officer Displayed Value:

$$\frac{(\text{Budget for PCS for those with two homes} / \text{Total Inventory}) + (\text{Budget for PCS with Dependents not authorized} + \text{Budget for TDY greater than 30 days with Dependents not near station})}{\text{Total Projected End Strength}}$$

Source

Defense Finance and Accounting Service (DFAS) Website's Pay Table link is <http://www.dfas.mil/> and/or the Fiscal Year (FY) President's Budget Military Personnel, Army (MPA) Justification Books.

AVG COST OF OVERSEAS STATION ALLOWANCE

Description

The Overseas station allowance allows a member assigned to an overseas location to defray a significant amount of the housing cost associated with that duty station.

Business Logic

All soldiers stationed in an overseas duty station (excluding Hawaii and Alaska) will receive this allowance.

Location non-specific: Average cost is simply the budgeted amount divided by inventory

Location specific: The cost comes from the Defense Travel Management Office (DTMO) by combining the Overseas Rental Allowance, Utility/Recurring Maintenance Allowance, and any Move-In-Housing Allowance (MIHA) authorized.

Basis of Computation

Location non-specific:

3 Year Moving Average of the Overseas Budget amount for Enlisted or Officers (includes Warrants) / Inventory for the corresponding for Enlisted or Officers.

Location non-specific

DTMO amounts for the selected location and grade level. DMDC Dependent data is used to compute the with or without dependents weighting at each grade level.

Source

The Fiscal Year (FY) President's Budget Military Personnel, Army (MPA) Justification Book and the DTMO website <https://www.defensetravel.dod.mil/>

CATEGORY – MEDICAL SUPPORT COSTS

The cost elements under this category include:

AVG COST OF MEDICAL SUPPORT COSTS

Description

Active-duty service members and their dependents receive medical health care coverage. These medical support costs are the variable non-pay costs, e.g., the TRICARE Program; military / civilian in-patient and outpatient medical care; and prescription programs.

Business Logic

Per the annual Department of Defense (DoD) Financial Management Tab K Memorandum— The Under Secretary of Defense (Comptroller) typically releases the Military Personnel Composite Standard Pay and Reimbursement Rates in March, each year. The acceleration factor represents medical health care costs for active-duty personnel and their dependents. AMCOS calculations include a constant cost value, based on the current acceleration factor FY.

Basis of Computation

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved. Use the acceleration factor taken directly from the posted current FY composite pay and reimbursement rate (TAB K) memorandum.

Avg Annualized Cost of Health Care = [Acceleration Factor Used to Cover Medical Health Care Costs of Active-Duty Personnel and their Dependents].

Source

Link is <http://comptroller.defense.gov/Financial-Management/Reports/>

Financial Management – Reports - DoD FY XX Reimbursable Rates - Military Personnel Composite Standard Pay and Reimbursement Rates (Tab K-1). Typically, the Under Secretary of Defense (Comptroller) releases the memorandum in March, each year.

AVG ANNUALIZED COST OF HEALTH CARE

Description

Medical health care covers costs for service members and their dependents. These medical support costs are the variable non-pay costs, e.g., the TRICARE Program; military / civilian in-patient and outpatient medical care; and prescription programs.

Business Logic

Per the annual Department of Defense (DoD) Financial Management Tab K Memorandum— The Under Secretary of Defense (Comptroller) typically releases the Military Personnel Composite Standard Pay and Reimbursement Rates in March, each year. The acceleration factor represents medical health care costs for active-duty personnel and their dependents. AMCOS modules include a constant cost value, based on the current acceleration factor FY. AMCOS provides an NG or Reserve service member's health costs based on the number of Active-Duty Days performed per year.

Basis of Computation

AMCOS makes no calculation, constant value across all ranks.

Displayed value for Avg Annualized Cost of Health Care:

$$[(\text{Acceleration Factor Used to Cover Medical Health Care Costs of Active-Duty Personnel and their Dependents}) / (\text{Days per Year})] * (\text{Active Duty Days}).$$

Source

Link is <http://comptroller.defense.gov/Financial-Management/Reports/>

Financial Management – Reports - DoD FY XX Reimbursable Rates - Military Personnel Composite Standard Pay and Reimbursement Rates (Tab K-1). Typically, the Under Secretary of Defense (Comptroller) releases the memorandum in March, each year.

CATEGORY – MILITARY COMPENSATION

Military Compensation is comprised of three areas: Base Pay, Housing (BAH), and Subsistence (BAS). The following Active, National Guard, and Reserve cost elements under this Military Compensation category include:

AVG COST OF BASE PAY (MILITARY)

Description

All active-duty service members receive basic pay. Basic pay is the common monthly salary by rank and Years of Service (YOS) regardless of the Soldier's occupation (MOS/AOC). The military pay table lists YOS starting the range with zero (under 1 year of service) and running through the number of reported years. Exclude any reported unknown YOS values HRC Data Set from VANTAGE reports as YOS = 99 from the weighted salary calculations.

Business Logic

AMCOS calculates a weighted basic pay average for each rank to account for the diverse salary range across all YOS within each reported MOS or AOCs inventory. A download of the Human Resources Command (HRC) Data Set from VANTAGE, provides a snapshot of the most recently completed fiscal years' (30 September) inventory. Each inventory record contains the MOS / AOC, rank, and YOS of every Army position. This method of averaging by rank allows for differences in YOS among the Army population of active-duty service members.

NOTE: AMCOS excludes all HRC Data Set from VANTAGE for Military Inventory reported YOS = 99 (Unknown) from the weighted salary calculations.

Basis of Computation

Multiply the monthly basic pay from the pay table for a rank and YOS by twelve for each YOS values to produce an annual pay rate for each YOS within the rank. Then multiply this annual base pay rate by the inventory present in each YOS within the rank to produce an annual total for that YOS. Sum all multiplication products calculated for each YOS with inventory present across the rank and then divide by the total active inventory for the rank to produce a weighted Average Cost of Base Pay for the rank.

Displayed Value:

$$\text{Average Cost of Base Pay (Military)} = \frac{[\text{SUM (Basic pay by rank_YOS)} * (12) * (\text{Inventory_by rank_YOS})]}{[\text{Total Inventory_by rank}]}$$

Source

Defense Finance and Accounting Service (DFAS) Military Pay Charts link is <http://www.dfas.mil/militarymembers/payentitlements/military-pay-charts.html>.

AVG COST OF BASIC ALLOWANCE FOR HOUSING

Description

Military members are entitled to receive Basic Allowance Housing (BAH). The payments for BAH are either distributed to the Servicemember if they are living off post or are paid directly to the post to support Government housing. The application of BAH depends on the Servicemember's status:

Active-duty soldiers receive BAH based on their grade type, grade level, location, and dependent status. AMCOS uses Defense Manpower Data Center (DMDC) pay data and the Army's Budget to allocate those costs to the appropriate grade levels and subgroups.

Business Logic

Location non-specific:

AMCOS allocates BAH costs at the Grade Level, so all subgroups have the same BAH cost basis. Three-year average data from DMDC's pay report using 'Basic Allowance for Housing' and 'Family Separation Housing BAH' are used and then adjusted based on the last three years from the President's Budget request. The value at the pay plan and grade level divided by the corresponding inventory is the average value.

Location specific:

AMCOS uses DTMO data to provide the latest BAH costs for the selected location.

Basis of Computation

Displayed Value Location non-specific:

$$\text{Avg(DMDC Payment @ Grade Level per PP)} * (\text{PB 3yr Avg} / \text{Sum(DMDC Pay @ PP Level)}) \\ = \text{Average Cost at the PP and Grade Level}$$

Displayed Value Location specific:

BAH from DTMO with, without, and based on average dependents. AMCOS computes the average dependent costs based on the DMDC data for number of dependents by grade level and pay plan.

Source

Defense Manpower Data Center (DMDC) pay data, the President's Budget Military Personnel, Army (MPA) Justification Book, and the DTMO website <https://www.defensetravel.dod.mil/>

AVG COST OF BASIC ALLOWANCE FOR SUBSISTENCE

Description

Basic Allowance for Subsistence (BAS) is a non-taxable allowance to defray a portion of the cost of a service member's meals. BAS does not cover the costs of meals for family members. This allowance originates from military history where room and board (rations) were part of a member's pay. Based on the Agriculture Department's USDA food-cost index, BAS adjusts annually with no ties to the military pay raises.

Business Logic

AMCOS calculates and displays one rate for enlisted and another for Officers & Warrants (O/W). This allowance does not vary by individual rank or within the years of service (YOS) for O/W, but it may for Enlisted members. O/W use the static amount while Enlisted uses DMDC reported pay data.

✓ Basis of Computation

Displayed Value:

Active O/W = Reported rate for O/W in the President's Budget * 12

NG/R O/W = Active O/W *12 / 365 *15

Active Enlisted = Sum(DMDC Pay @ Grade Level/PP) * (PB 3yr Avg / Sum(DMDC Pay @ PP Level)

NG/R Enlisted = Active Enlisted *12 / 365 *15

i Source

Defense Manpower Data Center (DMDC) pay data, the President's Budget Military Personnel, Army (MPA) Justification Book and the DTMO website <https://www.defensetravel.dod.mil/>

AVG ANNUALIZED COST OF BASE PAY (MILITARY)

🔍 Description

The model assumes all Reserve and National Guard soldiers receive monthly Drill pay (2 days/month * 12 = 24 days) plus 15 days of Active-Duty Training (ADT) per year. Drill & ADT pay tables are common to all Reserve Component personnel, regardless of occupation. Monthly drill salaries differ by rank and years of service (YOS); the table YOS range starts with zero (under 1 year of service) and runs through 41 years. Any reported unknown YOS values are reported as YOS = 99 and are excluded from the weighted salary calculations.

💡 Business Logic

AMCOS calculates a weighted basic pay average for each rank to account for the diverse salary range across all YOS within each reported MOS or AOCs inventory. A download of the HRC Data Set from VANTAGE provides a snapshot of the most recently completed fiscal year's (30 September) inventory for military inventory. Each Reserve and National Guard inventory record contains the MOS/AOC, rank, and YOS for every Army position. This method of averaging by rank allows for differences in YOS among the Army population of Army Reserve and National Guard service members.

❗ **NOTE:** YOS = 99 means the YOS is unknown and AMCOS excludes the inventory count from the inventory and weighted basic pay calculations.

✓ Basis of Computation

The sum of [Monthly Drill Pay multiplied by 12 months/year) + (15-days of annual Active-Duty Training (ADT) Pay from the Active pay table for a rank and each YOS)] to produce an annual pay rate for each YOS within the rank. Multiply the annual drill pay rate by the inventory present in each YOS within the

rank to produce an annual total for that YOS. Sum all multiplication product calculations for YOS with inventory present in the ranks and then divided by the total inventory for the rank to produce a weighted Average Cost of Base Pay for the rank.

Displayed Value:

Average Cost of Base Pay (Military) = SUM [((Sum Monthly DRILL * 12) + (15-days ADT Pay_by Rank_YOS)) * (Inventory_by Rank_YOS)] / [Total Inventory_by Rank].

Source

Defense Finance and Accounting Service (DFAS) Military Drill Pay Charts link is <http://www.dfas.mil/militarymembers/payentitlements/military-pay-charts.html>

AVG COST OF COST-OF-LIVING ALLOWANCE (COLA)

Description

Military members may receive COLA depending on the location they are stationed.

Business Logic

Location non-specific:

AMCOS allocates COLA costs at the Grade Level, so all subgroups are assumed to have the same COLA cost basis. Three-year average data from DMDC's pay report using COLA elements are used and then adjusted based on the latest three years from the President's Budget request. The value at the pay plan and grade level divided by the corresponding inventory is the average value.

Location specific:

AMCOS uses DTMO data to provide the latest COLA costs for the selected location.

Basis of Computation

Displayed Value Location non-specific:

Sum(DMDC Pay @ Grade Level per PP) * (PB 3yr Avg / Sum(DMDC Pay @ PP Level) = Average Cost at the PP and Grade Level

Displayed Value Location specific:

COLA from DTMO with, without, and based on average dependents. AMCOS computes the average dependent costs based on the DMDC data for number of dependents by grade level and pay plan. AMCOS also considers the average years of service for a given grade level.

Source

Defense Manpower Data Center (DMDC) pay data, the President's Budget Military Personnel, Army (MPA) Justification Book, and the DTMO website <https://www.defensetravel.dod.mil/>

AVG COST OF NON-LOCALITY BASIC ALLOWANCE FOR HOUSING

Description

Reservists on active duty for less than 30 days. Soldiers in transit where no prior BAH rate exists and Soldiers who live in government housing and pay child support receive non-locality pay, which depends on grade level and dependent status.

Business Logic

While DMDC reports the cash outlays for NG/R Soldier's BAH, the presence of Active Guard and Reserve (AGR), and other special circumstances inflate what could be attributable to a drilling Soldier. To calculate an appropriate average amount, the model uses the BAH Non-locality pay data from Defense Travel and combines it with dependent data from DMDC.

The Non-Locality BAH is a monthly figure so it is converted to a daily amount and then up converted to the number of annual training days as defined in the President's Budget.

Basis of Computation

Displayed Value:

At each Grade Level: Non-Locality BAH for those with dependents * the percentage with dependents + Non-Locality BAH for those without dependents * the percentage without dependent * 12 / 365 * 15

Source

Defense Travel Non-Locality https://www.defensetravel.dod.mil/site/pdcFiles.cfm?dir=/Allowances/Non-Locality_BAH and DMDC NG/R Dependent data

CATEGORY – MORALE, WELFARE AND RECREATION COSTS

The cost element under this category includes:

AVG COST OF MORALE, WELFARE AND RECREATION

Description

Morale, Welfare, and Recreation (MWR) benefits pay from OMA dollars. MWR includes programs such as Sports and Fitness; Libraries; Arts and Crafts; and Outdoor Recreation designed to improve Soldier readiness by promoting mental and physical fitness; building morale; increasing family self-reliance; and enhancing Soldier, family, and Army civilian well-being. These programs have direct links to readiness and retention and form an integral part of the non-pay compensation system. MWR programs are equally applicable to active officers and enlisted soldiers.

Business Logic

Service member use of MWR activities indicates that there is little or no variation across rank or MOS, therefore the average cost of MWR applies equally to each member by AMCOS. To calculate the average cost of MWR, total MWR OMA costs from the Operation and Maintenance, Army (OMA) Justification Book divides by the Total Active Army Inventory to determine a per capita MWR cost per active Soldier.

Basis of Computation

The total cost for MWR is divided by the applicable FY active end strength to calculate a per Soldier cost.

Displayed value:

MWR_Total_Costs / Active Army Endstrength.

Source

MWR Fiscal Year (FY) Operation and Maintenance, Army Vol 1 (OMA-V1) Budget Book costs and reported Total Active Army Inventory from MPA J-Book or HRC Data Set from VANTAGE inventory.

CATEGORY – OFFICER ACQUISITION COSTS

The Officer Acquisition category includes costs associated with the acquisition of officers into the Army, such as advertising; scholarships; initial training; military pay and allowances for cadets and officer candidates; and operations and support costs for the U.S. Military Academy, Officers' Candidate School, and Reserve Officers' Training Corps.

The cost elements under this category include:

ACTUAL COST OF OFFICER ACQUISITION BONUS

Description

The Reserve Components may use accession and affiliation bonus to attract officers. The Financial Management Regulation (FMR) has authority over authorized bonus amounts. AMCOS obtains actual pay amounts from DMDC at the subgroup level, which allows for a high level of accuracy in allocating these costs.

Business Logic

AMCOS uses a three-year average of DMDC payments to allocate these bonus costs to each applicable subgroup.

Basis of Computation

Displayed value:

Avg of DMDC Pay costs over 3 years where the reported pay type is Sel Res Officer Accession Bonus or Sel Res Officer Affiliation Bonus

Source

DMDC Pay Data.

AVG COST OF OFFICER ACQUISITION

Description

An officer has many paths through which they may join the Army which include Officer Candidate School (OCS), The U.S. Military Academy (USMA), Reserve Officer Training Corps (ROTC), National Guard OCS, and Direct Commission to name a few. Each pay plan's officers may use a different ratio of these paths to reach an ultimate commission. AMCOS attempts to allocate all applicable costs in a ratio most closely matching the ratio used by its respective pay plan. The cost of accession and affiliation bonus are also included (see Actual Cost of Officer Acquisition Bonus) using the CGLA process.

Business Logic

AMCOS calculates an average cost of officer acquisition by using all the computations displayed in the section below. AMCOS uses the budget / actual amount for each acquisition source whenever possible but estimates some, such as MPA costs for military support staff. The DMDC transaction file provides the source of commission for each pay plan.

✓ Basis of Computation

Accession Move

MPA Cost of an Accession Move = 3 Year Avg Budget for Accession Travel / Number of Active Component O/Ws

Recruiting/Advertising

OMA Cost of Advertising = 3 year Avg budget amount for advertising * (O/W inventory / Total Inventory) / O/W Inventory

RPA Cost of Recruiting = 3 year Avg budget amount for Non-FT Recruiting * (RO/RWO inventory / Total Reserve inventory)

NGPA Cost of Recruiting/Retention = 3 year Avg budget amount for Recruiting Retention * (NO/WWO inventory / Total NG inventory)

USMA

MPA = 3 yr Avg MPA budget + (USMA 3 year Avg number of officers * O5 composite standard rate) + (USMA 3 year Avg number of enlisted * E7 composite standard rate) + (USMA 3 year Avg number of warrants * W2 composite standard rate)

OMA = 3 yr Avg OMA budget

OCS

MPA = ATRM-159 reported MPA cost per student

OMA = ATRM-159 reported OMA cost per student

NG-OCS

NGPA = 3 yr Avg NGPA budget

OMNG = 3 yr Avg OMNG budget

ROTC

OMA Non-Scholarship = Non-scholarship 3 yr Avg budget / 2

OMA Scholarship = MPA Non-Scholarship + ROTC Scholarship 3 yr Avg budget

MPA Non-Scholarship/Scholarship = ratio of scholarship/non-scholarship students * (3 yr Avg Enlisted support staff * E7 composite standard rate + 3 yr Avg Officer support staff * O5 composite standard rate + 3 yr Warrant support staff * W2 composite standard rate)

Direct Commission

MPA = ATRM-159 reported DCOC cost per student

OMA = ATRM-159 reported DCOC cost per student

Avg Cost of Office Acquisition – For simplicity purposes, AMCOS displays all NG/R costs in their respective APPNs even though the costs are a mix of Active and NG/R APPNs. Also, this CE is calculated via the Pay Plan Allocation (PPA) process so other than NG/R bonus amounts, the calculated cost is the same across all grade levels and subgroups within a given pay plan.

Active

MPA = Accession move + DMDC Source of Acquisition ratio of the cost for MPA of USMA/OCS/NG-OCS/ROTC/DC

OMA = OMA Recruiting/Advertising + DMDC Source of Acquisition ratio of the cost for OMA of USMA/OCS/NG-OCS/ROTC/DC

Reserve

RPA = RPA Recruiting/Retention + DMDC Source of Acquisition ratio of the cost for MPA of USMA/OCS/NG-OCS/ROTC/DC + CGLA(Accession/Affiliation bonus)

OMAR = OMA Recruiting/Advertising + DMDC Source of Acquisition ratio of the cost for OMA of USMA/OCS/NG-OCS/ROTC/DC

NG

NGPA = NGPA Recruiting/Retention + DMDC Source of Acquisition ratio of the cost for MPA of USMA/OCS/NG-OCS/ROTC/DC

OMNG = OMA Recruiting/Advertising + DMDC Source of Acquisition ratio of the cost for OMA of USMA/OCS/NG-OCS/ROTC/DC + CGLA(Accession/Affiliation bonus)

Source

Fiscal Year (FY) President's Budget Military Personnel, Army (MPA) Justification Book, DMDC transaction with Source of Commission (SoC) data and TRADOC ATRM-159 Report.

CATEGORY – OTHER BENEFITS

The cost elements under this category include:

AVG COST OF FICA / AVG ANNUALIZED COST OF FICA

Description

The FICA tax represents the employer paid funds (tax) to the Social Security Administration (SSA) as required by the Federal Insurance Contribution Act. The FICA cost element consists of two taxes rates: Old Age, Survivor Disability Insurance (OASDI – 6.2%) and Medicare Hospital Insurance (HI – 1.45%) tax rates. AMCOS applies the sum of these two rates (7.65%) up to the maximum salary cap.

OASDI limits the amount of earnings subject to taxation for a given year. This limit changes each year with changes in the national average wage index. SSA refers to this annual limit (cap) as the OASDI Contribution and Benefit Base.

Business Logic

The FICA percentage is determined by taking the Percentage composed of Old Age, Survivor Disability Insurance (OASDI) plus Medicare Hospital Insurance (HI) Rate for the current YR. The model applied two calculations to compute a weighted FICA average based on inventory by MOS / YOS / Rank for these cost elements. First calculation multiplies the current FICA tax rate by the weighted average cost of basic pay up to the OASDI Contribution and Benefit Base (maximum limit). Use the second calculation when the weight salary average exceeds the Contribution and Benefit Base; in other words, it is capped or limited.

Basis of Computation

If Basic Pay (annual) < Old Age, Survivor, and Disability Insurance (OASDI) Base,

$$\text{Then Avg Cost of FICA} = \frac{\text{Basic Pay} * \text{Inventory per MOS, YoS, and Rank}}{\text{Total Inventory}} * (\text{OASDI} + \text{HI})$$

If Basic Pay (annual) >= OASDI Base, then

$$\text{Avg Cost of FICA} = \frac{\text{OASDI Base} * \text{Inventory per MOS, YoS, and Grade}}{\text{Total Inventory}} * (\text{OASDI} + \text{HI})$$

Source

Use the Social Security website: <https://www.ssa.gov/oact/cola/cbb.html> for verification of the OASDI Contribution and Benefit Base and FICA rates.

AVG ANNUALIZED COST OF HEALTH CARE

NOTE: Active, NE & RE costs are in *Category –Medical Support Costs*

Description

Medical health care coverage costs for service members and their dependents. These medical support costs are the variable non-pay costs: e.g., the TRICARE Program; military / civilian in-patient and outpatient medical care; and prescription programs.

Business Logic

Per the annual Department of Defense (DoD) Financial Management Tab K Memorandum— The Under Secretary of Defense (Comptroller) typically releases the Military Personnel Composite Standard Pay and Reimbursement Rates in March, each year. The acceleration factor represents medical health care costs for active-duty personnel and their dependents. AMCOS modules include a constant cost value, based on the current acceleration factor FY. AMCOS prorates an NG or Reserve service member's health costs based on the number of Active-Duty Days performed per year.

Basis of Computation

Display value of Avg Annualized Cost of Health Care:

$$[(\text{Acceleration Factor Used to Cover Medical Health Care Costs of Active-Duty Personnel and their Dependents}) / (\text{Days per Year})] * (\text{Active Duty Days}).$$

Source

Link is <http://comptroller.defense.gov/Financial-Management/Reports/>

Financial Management – Reports - DoD FY XX Reimbursable Rates - Military Personnel Composite Standard Pay and Reimbursement Rates (Tab K-1). Typically, the Under Secretary of Defense (Comptroller) releases the memorandum in March, each year.

AVG COST OF CLOTHING ALLOWANCE

Description

By law, all soldiers are entitled to an initial clothing issue, cash allowance, or a combination of the two.

Business Logic

The model calculates an initial entry in-kind cost and a uniform/equipment allowance amount.

Basis of Computation

In-kind: President's Budget amount (total budget amount for clothing) – cash payments from DMDC = In-kind amount total. Per costs then are the budget amount / YOS=0 inventory = Per new recruit cost * YOS0 at each grade level / total inventory at that grade level.

In-cash: DMDC Pay for Uniform/Equipment Allowance at each grade level/ total inventory at that grade level

Total clothing cost = In-Kind + In-Cash

Source

Fiscal Year (FY) President's Budget Military Personnel, Army (MPA), National Guard Personnel, Army (NGPA), and Reserve Personnel, Army (RPA) Justification Books, DMDC Pay.

AVG COST OF MISCELLANEOUS

Description

The active miscellaneous benefits consist of a number of entitlements by sub-activity, which include the Apprehension of Deserters, Absentees, Escaped Prisoners, Death Gratuities, and Unemployment Compensation Benefits, to include the total average of inventory projected.

Business Logic

The active miscellaneous benefits consist of a number of entitlements by sub-activity found in the FY President's Budget Military Personnel, Army (MPA) Justification Book.

Basis of Computation

For AE:

Avg Cost of Miscellaneous

$$= (\text{Apprehension Deserters, Absentees, Escaped Prisoners} \\ + \text{Interest on Uniformed Services Savings Deposits} \\ + \text{Death Gratuities} \\ + \text{Unemployment Compensation Benefits}) \\ / (\text{Total Average Inventory Projected})$$

For AO & AWO:

$$\text{Avg Cost of Miscellaneous} = \frac{\text{Total Other Military Personnel Costs}}{\text{Total Average Inventory Projected}}$$

Source

Fiscal Year (FY) President's Budget Military Personnel, Army (MPA) Justification Book

AVG COST OF OTHER BENEFITS

Description

Other Benefits is the average cost of Clothing Allowance, FICA, and Miscellaneous

Business Logic

The model sums the average costs of the clothing allowance, FICA, and Miscellaneous, in the applicable MPA Budget Book and applies to each rank.

Basis of Computation

Avg Cost of Clothing Allowance + Avg Cost of FICA + Avg Cost of Miscellaneous

Source

Fiscal Year (FY) President's Budget Military Personnel, Army (MPA) Justification Book

AVG FIXED COST OF G.I. BILL

Description

This is an estimate of the expected present value of the basic benefit associated with the Average Fixed Cost of G.I. Bill, calculated from a combination of education benefits. Benefits include Basic Benefit (Chapters 1606 & 1607), Kicker, Enhanced G.I. Bill (Ch.1606), and Amortization Amount. Divide the sum of the benefit costs by the enlisted projected inventory to make a constant value for each component (Reserve & NG).

Business Logic

Calculate an average fixed cost for each component (NG and Reserves) based on summing the component's education benefits and dividing by the component's total projected enlisted inventory to create a constant G.I. Bill value.

Basis of Computation

For NE & RE:

$$\text{Avg Fixed Cost of GI Bill} = (\text{Basic Benefit} + \text{Kicker}) / (\text{Total Average Inventory Projection})$$

Source

Fiscal Year (FY) President's Budget National Guard Personnel, Army (NGPA) and Reserve Personnel, Army (RPA) Justification Books.

AVG FIXED COST OF STUDENT LOAN REPAYMENT PROGRAM

Description

The Student Loan Repayment Program (SLRP) is available upon enlisting, reenlisting, or extending in the Selected Reserve. Make this payment for each year of satisfactory service in the Selected Reserve, until the outstanding loan is repaid.

Business Logic

The SLRP applies to NE and RE divided by their respective inventory.

Basis of Computation

NE:

$$= \frac{\text{Student Loan Repayment Program (RPA)}}{\text{Total Average Inventory Projected}}$$

RE:

$$= \frac{\text{Student Loan Repayment Program (RPA)}}{\text{Total Average Inventory Projected}}$$

Source

Fiscal Year (FY) President's Budget National Guard Personnel, Army (NGPA) and Reserve Personnel, Army (RPA) Justification Books.

CHILD EDUCATION (IMPACT AID)

Description

Impact Aid assists local school districts that have lost property tax revenue due to the presence of tax-exempt Federal property, or that have experienced increased expenditures due to the enrollment of federally connected children, including children living on Indian lands. The Impact Aid law, now called Title VIII of the Elementary and Secondary Education Act of 1965 (ESEA), aids local school districts with concentrations of children residing on:

- **Indian lands, military bases, low-rent housing properties, or other Federal properties**
- **To a lesser extent, concentrations of children who have parents in uniformed services or employed on eligible Federal properties who do not live on Federal property.**

Business Logic

When considering the fully burdened cost of military personnel for workforce-mix decisions, AMCOS includes the current FY's constant cost value, based on the Full Cost of Manpower (FCoM) model. Based on execution data across all DoD services and populations, Full Cost of Manpower (FCOM) factors provide a per capita cost for each Army service member for AE, AO, and AWO pay plans.

Basis of Computation

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

[Sum the (Total Payments Military Type “a” Students) + (Total Payments Military Type “b” Students)] / [Military End Strength + AGR + ADOS].

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

DISABILITY, HOSPITALIZATION & DEATH GRATUITIES

Description

Members who suffer injury or disability or who contract a disease in the line of duty, active or inactive, are eligible for hospitalization, pay, and allowances during hospitalization. In addition, individuals who must leave the Reserve Components because of a physical disability that resulted from their service generally are eligible for severance pay.

Business Logic

The model calculates the average annual cost of disability, hospitalization, and death gratuity payments as the total cost divided by the total Selected Reserve or National Guard inventory. The model applied this average to all soldiers.

✓ **Basis of Computation**

NE, NO, NWO:

$$\frac{\text{Disability, Hospitalization, Death Gratuities} + \text{Death Gratuities} + \text{Disability and Hospitalization Benefits (National Guard Personnel, Army)}}{\text{Total End Strength for Pay Plan}}$$

RE, RO, RWO:

$$\frac{\text{Disability, Hospitalization, Death Gratuities} + \text{Death Gratuities} + \text{Disability and Hospitalization Benefits (Reserve Personnel, Army)}}{\text{Total End Strength for Pay Plan}}$$

Source

Fiscal Year (FY) President's Budget National Guard Personnel, Army (NGPA) and Reserve Personnel, Army (RPA) Justification Books.

DISCOUNT GROCERIES

Description

The Full Cost of Manpower (FCOM) takes the total Defense Commissary Agency's (DeCA) Appropriation funds and divides by the Active Duty (Equivalents and Retirees) to formulate a constant cost factor used to report this cost element.

Business Logic

When considering the fully burdened cost of military personnel for workforce-mix decisions, AMCOS includes the current FY's constant cost value, based on the Full Cost of Manpower (FCoM) model. Based on execution data across all DoD services and populations, FCOM factors provide a per capita cost for each Army service member for AE, AO, and AWO pay plans.

✓ **Basis of Computation**

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

$$\frac{[\text{FYxxxx Budget Authority; Row, Working Capital Fund Defense Commissary Agency (Total Budget Authority)}]}{[\text{Retiree} + \text{Military End Strength} + \text{AGR} + \text{ADOS}]}$$

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

DODEA AND FAMILY ASSISTANCE

Description

The Full Cost of Manpower (FCOM) takes the Defense-wide Education Activity SAG 4GTJ and divides by the sum of [Military Personnel End Strength + AGR + ADOS] to formulate a constant cost factor used to report this cost element.

Business Logic

When considering the fully burdened cost of military personnel for of workforce-mix decisions, AMCOS includes the current FY's constant cost value, based on the Full Cost of Manpower (FCoM) model. Based on execution data across all DoD services and populations, FCOM factors provide a per capita cost for each Army service member for AE, AO, and AWO pay plans.

Basis of Computation

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

$$\text{[Defense-wide Education Activity SAG 4GTJ]} / \text{[Military End Strength + AGR + ADOS]}$$

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

CATEGORY – PERMANENT CHANGE OF STATION COSTS

Although all PCS Cost Elements are discussed under this category, note that the average cost of an accession move is included in recruiting costs, the average cost of a separation move is included in separation costs, and the average cost of a training move is included in training costs.

AVG COST OF AN OPERATIONAL MOVE

Description

The Operational move cost factor covers PCS movements of personnel:

- To and from permanent duty stations located within the United States.
- To and from permanent duty stations within an overseas area when no transoceanic travel is involved.
- To and from for dependents, household goods, personal effects, trailer allowances, and privately owned vehicles of enlisted personnel who are interned, missing, or captured, provided no transoceanic travel is involved.

Business Logic

Base the cost associated with each operational move of this cost on the budget divided by inventory.

Basis of Computation

AMCOS calculates the Average Cost of an Operational Move as the three-year average of the budget divided by sum of inventory.

Source

Operational Move: Fiscal Year (FY) President's Budget MPA J-book for the published operational move rates.

AVG COST OF AN ORGANIZED UNIT MOVE

Description

Covers PCS movements of service members directed to move as members of an organized unit movement or as fillers/replacements directed to move as part of a unit move.

Business Logic

Base the cost associated with each operational move of this cost on the budget divided by inventory.

Basis of Computation

AMCOS calculates the Average Cost of an Organized Move as the three-year average of the budget divided by sum of inventory.

Source

Organized Move: Fiscal Year (FY) President's Budget MPA J-book.

AVG COST OF A ROTATIONAL MOVE

Description

The Rotational move cost factor covers the PCS movements of Army personnel

- From permanent duty in CONUS to permanent duty stations overseas.
- From permanent duty stations overseas to permanent duty stations in CONUS.
- Only when transoceanic travel is involved, from permanent duty stations overseas to permanent duty stations in another overseas area.
- Dependents, household goods, personal effects, and trailer allowances.
- Only when transoceanic travel is involved, privately owned vehicles of personnel who are interned, missing, or captured.

Business Logic

The cost associated with each operational move of this cost is based on the budget divided by military inventory.

Basis of Computation

The computation uses the three-year average budget divided by sum of military inventory.

Source

Rotational Move: Fiscal Year (FY) President's Budget MPA J-book.

AVG COST OF AN SEPARATION MOVE

Description

The Separation Move cost factor covers PCS movements of officers upon separation from the service from their last permanent duty station to their home of record, point of entry into service, or to their home of selection when authorized by law.

Business Logic

There is a cost associated with the separation of soldiers from the Army. The Separation Move cost is based on the amount on weight allowances, which differs for each rank.

Basis of Computation

The computation uses the three-year average budget divided by sum of military inventory.

Source

Separation Move: Fiscal Year (FY) President's Budget MPA J-book.

AVG COST OF AN TRAINING MOVE

Description

AE – The training move cost factor covers the PCS movements for:

- Enlisted personnel from a previous CONUS permanent duty station to formal service or civilian schools, including technical schools, aircraft maintenance training, factory training, and other approved courses of instruction of 20 weeks' duration or more;
- Enlisted school graduates and those eliminated from school to their next CONUS permanent duty station; and
- Enlisted personnel ordered to training to a commission, if such training period is 20 weeks' duration or more.

AO - The Training move cost factor covers CONUS PCS movements for officers:

- From current permanent duty station to formal service or civilian schools, including technical schools, pilot training, factory training, and other approved courses of instruction of 20 weeks' duration or more, and
- To next CONUS permanent duty station upon completion of school or when eliminated from school before completion. Excludes academy graduates, OCS graduates, ROTC graduates, and others (chargeable as Accession Travel) and those officers who are moving into and out of a training seat from/to an overseas location (chargeable as Rotational travel).

AWO - The Training move cost factor covers CONUS PCS movements for Warrant Officers:

- From current permanent duty station to formal service or civilian schools, including technical schools, pilot training, factory training, and other approved courses of instruction of 20 weeks' duration or more.
- To next CONUS permanent duty station upon completion of school or when eliminated from school before completion.

Business Logic

There is a cost associated with the training of officers in the Army. The amount of this move cost is based upon a weight allowance, which differs for each rank.

Basis of Computation

The computation uses the AMCOS calculates the Average Cost of a Separation Move by three-year average of the budget divided by sum of military inventory

Source

Training Move: Fiscal Year (FY) President's Budget MPA J-book.

AVG PERMANENT CHANGE OF STATION-ANNUALIZED

Description

This cost element is the sum of all other PCS costs.

Business Logic

There is a cost associated with PCS on an annualized basis, which includes all other PCS costs.

Basis of Computation

PCS-Annualized is the sum of all the other PCS move cost elements

Source

Permanent Change of Station: Fiscal Year (FY) President's Budget MPA J-book.

CATEGORY – RECRUITING COSTS

The Enlisted Recruiting Module consists of all the variable costs of recruiting and advertising needed to process enlisted personnel into the Army. The cost elements include:

ACTUAL COST OF ENLISTMENT BONUS

Description

Enlistment bonuses are paid out in accordance with FMR and Army policy based on the specialty and length of the contract.

Business Logic

Enlistment bonus amounts are derived from DMDC Pay Data.

Basis of Computation

3-year avg DMDC Pay / inventory -> this calculation is done at each subgroup level

Source

DMDC Pay Data and HRC Data Set from VANTAGE for military inventory.

AVG RECRUITING COST

Description

The Army's goal is to recruit servicemembers into the enlisted ranks through several recruiting based programs.

Business Logic

All recruits have a cost associated with bringing them into the Army. Included in this cost factor are the costs of Enlistment Bonuses, examining costs, the cost of time to recruit these potential soldiers, and the cost of their accession move.

Basis of Computation

Accession Travel (AT)

MPA = 3-year avg budget amount for AT / E Inventory

Advertising

OMA = 3-year avg budget amount for advertising * (E inventory / Total Inventory) / E Inventory

Recruiting

MPA = (Officer Recruiters * O3 composite rate + Enlisted Recruiters * E7 composite rate) / E inventory

OMA = 3-year avg budget for recruiting / E inventory

RPA = 3-year avg budget amount for RPA recruiting / RE Inventory + 79R inventory * weighted base pay.

OMAR = 3-year avg budget amount for OMAR recruiting / RE Inventory

NGPA = 3-year avg budget amount for NGPA recruiting / NE Inventory + 79R inventory * weighted base pay.

OMNG = 3-year avg budget amount for OMNG recruiting / RE Inventory

Active

MPA = MPA AT + MPA Recruiting + CGLA (Enlistment Bonus)

OMA = OMA Advertising + OMA Recruiting

Reserve

RPA = RPA Recruiting + CGLA (Enlistment Bonus)

OMA = OMA Advertising + OMA Recruiting

NG

NGPA = NGPA Recruiting + CGLA (Enlistment Bonus)

OMNG = OMNG Advertising + OMNG Recruiting

Source

Recruiting Cost: Fiscal Year (FY) President's Budget MPA J-book. Military Personnel Composite Standard Pay and Reimbursement Rates (Tab K).

CATEGORY – RETIRED PAY ACCRUAL

The Retired Pay Accrual provides the funds for DoD's contribution to its military retirement fund, under the provisions of 10 USC 1466. The fund provides the Retired Pay Accrual payments for Active Component and Reserve Component Soldiers. The cost elements under this category include:

AVG COST OF RETIRED PAY ACCRUAL

Description

The model based a Soldier's retirement pay benefits on the President's Budget percentage and the weighted average pay for a position. To calculate this retired pay accrual cost, multiply the soldiers' inventory weighted base pay by the current FY's accrual rate found in the Military Personnel, Army (MPA) Justification Book.

Business Logic

AMCOS calculates this cost based on the current FY's retired pay accrual rates. The DoD Retirement Board of Actuary posts the approved Normal Cost Percentage (NCP) for the Active Army (Full Time Retired Pay Accrual Rate).

Basis of Computation

Multiply the inventory weighted base pay by the current published FY retired pay accrual percentage for a full-time Soldier.

Displayed value for the Avg Cost of Retired Pay Accrual:

(Avg Base Pay * Retired Pay Accrual Full Time Rate).

Source

Retired Pay Accrual: Fiscal Year (FY) President's Budget Military Personnel, Army (MPA) Justification Book.

AVG ANNUALIZED COST OF RETIRED PAY ACCRUAL

Description

The model based on Soldiers' retirement pay benefits. To calculate this retired pay accrual cost, multiply the military inventory weighted drill pay by the current FY's part-time percentage found in the Military Personnel, Army (MPA) Justification Book.

Business Logic

AMCOS calculates this cost based on the current FY's part-time retired pay accrual rates. The DoD Retirement Board of Actuary posts the approved Normal Cost Percentage (NCP) for the Reserve Component (Part Time Retired Pay Accrual Rate).

Basis of Computation

Multiply the average weighted base pay by the current published FY retired pay accrual part-time percentage.

Displayed value for the Avg Cost of Retired Pay Accrual:

(Avg Base Pay * Retired Pay Accrual Part Time Rate).

Source

Retired Pay Accrual: Fiscal Year (FY) President's Budget MPA J-book.

CATEGORY – RETIREMENT

The cost elements under this category include:

MEDICARE - ELIGIBLE RETIREE HEALTH CARE (MERHC)

Description

Beginning with FY2006, the MERHC accruals pay from the permanent, indefinite appropriations of the General Fund of the Treasury, instead of military personnel appropriations (MPA). However, for budget purposes, MERHC accruals continue to count as part of the Military Departments' discretionary budget authority.

Business Logic

Per the DoD Financial Management Tab K Memorandum, MERHC accruals must be included for determining MPA costs for budget/management studies. AMCOS modules include a constant cost value, based on the current FY.

Basis of Computation

No AMCOS calculations involved. Apply the Medicare-Eligible Retiree Health Care (MERHC) rate as a constant value for all active duty pay plans and ranks. Take cost directly from the posted current FY composite pay and reimbursement rate (TAB K) memorandum.

Source

The link is <http://comptroller.defense.gov/Financial-Management/Reports/>

Financial Management – Reports - DoD FY XX Reimbursable Rates - Military Personnel Composite Standard Pay and Reimbursement Rates (Tab K-1). Typically, the memorandum is released in March annually.

TREASURY CONTRIBUTION FOR CONCURRENT RECEIPTS

Description

The 2004 National Defense Authorization Act added a U.S. Treasury payment to cover the liability for concurrent receipt of military retired pay and disability compensation paid by the Department of Veterans Affairs (VA).

Business Logic

When considering the fully burdened cost of military personnel for of workforce-mix decisions, AMCOS includes the current FY's constant cost value, based on the Full Cost of Manpower (FCoM) model. Based on execution data across all DoD services and populations, FCOM factors provide a per capita cost for each Army service member for AE, AO, and AWO pay plans.

✓ Basis of Computation

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

$$\frac{[\text{Federal Contributions (concurrent Receipt Accruals), Military Retirement Fund}] / [\text{Retirees} + \text{Military End Strength} + \text{AGR} + \text{ADOS}]}{}$$

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

TREASURY CONTRIBUTION TO MERHCF

Description

The Medicare-Eligible Retiree Health Care Fund (MERHCF) was established to provide funds to pay for health benefits for Medicare-eligible DoD military retirees, retiree family members, and survivors.

Business Logic

When considering the fully burdened cost of military personnel for workforce-mix decisions, AMCOS includes the current FY's constant cost value, based on the Full Cost of Manpower (FCoM) model. Based on execution data across all DoD services and populations, FCOM factors provide a per capita cost for each Army service member for AE, AO, and AWO pay plans.

Basis of Computation

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

$$\frac{[\text{Payment to the Uniformed Retiree Health Care Fund}] / [\text{Retirees} + \text{Military End Strength} + \text{AGR} + \text{ADOS}]}{}$$

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

CATEGORY – SELECTIVE RETENTION BONUS

Retention bonuses are offered to members in an MOS on an optional basis based on policy in the appropriate MILPERS message. Note that SRB rules may change as frequently as quarterly, however AMCOS only updates its rules in conjunction with a major release to the database.

ACTUAL COST OF SELECTIVE RETENTION BONUS

Description

SRB rules on who is eligible for the bonus is straightforward with the Active Component but the Reserve Components have a wide degree of freedom to eligibility. This makes the actual payment data much more precise than a model based on probability and eligibility.

Business Logic

Use a 3-year average of DMDC pay actuals for Regular Reenlistment Bonus, Selective Reenlistment Bonus, Sel Res Prior Service Enlistment Bonus, and Sel Res Reenlistment Bonus.

Basis of Computation

Min (Min (3-yr avg bonus amount at each MOS and PP, MILPER Message cap), SRB Maximum per FMR)

Source

DMDC Pay & the FMR.

AVG COST OF SELECTIVE RETENTION BONUS

Description

SRB is a cost which is realized not just in the grade level receiving it but in each subsequent grade level since that Soldier is retained beyond when the payments are made. Therefore, AMCOS uses the CGLA process to allocate that cost across subsequent grade levels within a given MOS

Business Logic

Use the CGLA process to allocate the cost

Basis of Computation

CGLA (Actual Cost of Selective Retention Bonus)

Source

Actual Cost of SRB

CATEGORY – SEPARATION COSTS

The cost elements under this category include:

AVG COST OF ACCRUED LEAVE AND SEPARATION

Description

Upon voluntary separation, the Army pays out the balance of any accrued leave and separation pay.

Business Logic

AMCOS uses the total amount of lump sum terminal payments to create a factor. This factor applies on a per-rank basis across the projected inventory to provide an average cost.

Basis of Computation

(Severance Pay + Lump Sum Terminal Leave Pay) / Lump Sum Terminal Leave Pay * the per rank per rank expenditures / the projected inventory by rank.

Source

Cost of Accrued Leave and Separation: Fiscal Year (FY) President's Budget MPA J-book.

AVG COST OF ALL SEPARATION INCENTIVES

Description

All military personnel costs are associated with their separation from service.

Business Logic

The cost factor is a sum of three other cost factors: Average Cost of Separation Moves (Annualized); Average Cost of Accrued Leave and Separation Pay; and Average Cost of Involuntary Incentive Pay. The total is added to the model to give the total cost per person.

Basis of Computation

The model adds:

Avg Cost of Separation Moves (Annualized) + Avg Cost of Accrued Leave and Separation Pay + Avg Cost of Involuntary Incentive Pay.

Source

Cost of All Separation Incentives: Fiscal Year (FY) President's Budget MPA J-book.

AVG COST OF FULL INVOLUNTARY SEPARATION INCENTIVES

Description

Upon involuntary separation, the Army pays out the balance of any unused leave.

Business Logic

AMCOS uses the total amount of lump sum terminal payments to create a factor. This factor is then applied on a per-rank basis across the projected inventory to provide an average cost.

Basis of Computation

(Non-Disability Separation Pay / the total amount of Lump Sum Terminal Leave Payments) * the per rank expenditures / the projected inventory by rank.

Source

Ful involuntary Separation Incentives: Fiscal Year (FY) President's Budget MPA J-book.

CATEGORY – SPECIAL PAYS

AVG COST OF SPECIAL PAYS

Description

Special Pays, like SRB, consist of numerous rules regarding who is eligible to receive them in what amounts. AMCOS uses DMDC actual pay to accurately allocate these costs to the subgroups who received them.

Business Logic

Use the DMDC pay data three-year average and FMR pay caps to allocate special pay costs at the subgroup, grade level, and pay plan where they were paid. Inventory is also computed at a three-year average.

Basis of Computation

- Incapacitation Pay (IP) = IP / Inventory
- Hostile Fire and Imminent Danger Pay (HF&ID) = Min ((HF&ID) / Inventory, FMR Annual Cap)
- Hazardous Duty Pay (HzDP) = Min (HzDP) / Inventory, FMR Annual Cap)
- Hardship Duty Pay (HDP) = Min (HDP) / Inventory, FMR Annual Cap)
- Foreign Language Pay (FLP) = Min (FPL / Inventory, FMR Annual Cap)
- Diving Duty Pay (DDP) = Min (DDP / Inventory, FMR Annual Cap) where group/subgroup is:
 - O – 11,12,18,60,61,62,65
 - E – 18, 68W, 12D
 - W – 18
- Consolidated Special Pays (CSP) = Min (CSP / Inventory, FMR Annual Cap) for Officers in the Dental Corps, Medical Corps, Veterinary Corps, Medical Specialist Corps, Nurse Corps, Medical Service Corp, Medical, Health Services, Laboratory Sciences, Preventive medicine Sciences, or Behavior Science fields. Note that the FMR has different annual caps for the various CSP types (Accession Bonus (AP), Incentive Pay (IP), Retention Bonus (RB)) and AMCOS observes each of those caps for the corresponding pay type data provided by DMDC
- Board Certified Pay (BCP) = Min (BCP / Inventory, FMR Annual Cap) for Officers in the groups of 6X, 72 and 73
- Career Sea Pay (CSP) = Min (CSP / Inventory, FMR Annual Cap) for officers in the Transportation Corps
- Aviation Career Incentive Pay (ACIP) = Min (ACIP / Inventory, FMR Annual Cap) where
 - O – in Aviation or Special Forces career fields and 67J
 - W – in the Aviation field
- Avg Cost of Special Pays = the sum of each of the above individual elements

Source

DMDC Pay and FMR

CATEGORY – TRAINING

The military training category covers numerous military cost elements in numerous appropriations. The following training overview and general processing information are common and applicable to all elements. Training cost estimation is done through the combination of:

- **Training costs from HQ TRADOC’s Army Training Resource Management (ATRM) ATRM-159 Report**
- **Army Training Requirements and Resources System (ATRRS) data**
- **Army President’s Budget Data**

The traditional source of data for the military cost elements comes from the Resource Management Office of USA TRADOC’s ATRM-159 Report. The reports display calculated course costs based on instructor contact hours, student load, costs of supplies, ammunition, the flying hour program, and costs based on medical support, base support, and family housing. Typically, AMCOS reports costs in three appropriations (APPNs): MPA, OMA, and Other Costs (OMA-1).

- **MPA Costs.** The ATRM-159 determines MPA costs by calculating the pay and the allowances of both the students and the instructors for each course. The reports determine instructor contact hours (ICH) and converts ICH to man-years then multiplies by the average military compensation for each rank.
- **OMA Costs.** The reports display costs that reflect the actual O&M costs spent on individual training courses. They include instructor’s materials, flying hour costs (where applicable), and overhead costs. Again, a pro rata share of the O&M piece of Base Support and Medical Support is included in the cost factor. The OMA costs include pay for civilians. Allocate costs per training man-week.
- **Other Costs (OMA-1):** In each of the above appropriations, AMCOS uses the direct and indirect variable costs for all MOS producing sources and MOS required courses directly into the structured cost database. Other costs include procurement dollars for training ammunition and training devices, as well as FMHA dollars for maintenance of family housing.
- In order to assign each course to the appropriate cost element, AMCOS uses the following codes and business rules
- **Course Type “B” – Recruit Training** provides basic training (BT) to individual recruits. BT is an introductory course and combat survival skill-training course given to enlisted personnel upon their entry into military service. Courses identified as Fitness Training Units (FTU), Reception Battalions (RECBN or RECBTN), and prior service personnel in need of refresher training. Code these courses as course type “B”. Applies to enlisted student records only.
- **Course Type “AIT” – Advanced Individual Training** includes all formal training normally given immediately following recruit basic training and leads to the award of a MOS at the lowest level.
- **Course Type “OSUT” – One Station Unit Training** combines recruit basic training and Advanced Individual training for enlisted personnel in the combat arms and certain combat skills, into a single course. Training occurs at a single station under a single cadre.

- **Course Type “C”** – For Career Training, any skill-progression training provided to enlisted members after completion of Advanced Individual training will be coded “C”. This includes ASI/SQL courses through skill-progression training for students gaining the knowledge to perform at higher skill levels or in a superior position, e.g., ALC, SLC, U.S. Army Sergeant Major Academy (USASMA), NCO Academy.
- **Course Type “W”** – Courses that are directly attributable to a weapon system are coded “W.” This course type supersedes any of the other course types. For example, if a course type of AIT and W are applicable, the course type of W is always used.
- For Officer/Warrant Officer, AMCOS calculates training course costs in the following different course types to include:
 - **Course Type “C”** – Career Training is skill-progression training intended for officer and warrant officer students to gain the knowledge to perform at higher skill levels or in a superior position. This type of course also includes initial training for officers from the academies and senior ROTC program accessions.
 - **Course Type “F”** – Flight Training includes courses in the Army’s flight training programs categorized as Graduate Pilot Training, to include courses for instructor pilots, instrument flight examiner, gunnery, and specific pilot qualification courses in various aircraft.
 - **Course Type “IET”** – Initial Entry Training includes Warrant Officer Candidate School (WOCS), Basic Officer Leader Course (BOLC), Basic Officer Leader-Branch course, and Warrant Officer Basic Courses (WOBC).
 - **Course Type “U”** – Flight Training courses in the Army’s flight training programs categorized as Undergraduate Pilot Training (UPT). UPT courses qualify both commissioned officers and warrant officer aviation students to perform duties and assume the responsibilities of Army pilots.
 - **Course Type “P”** – Professional Training provides education to selected military and civilian personnel DoD-wide. It prepares them to perform increasingly complex tasks that become their responsibilities as they progress in their careers, e.g., pre-command, National Defense University (NDU), Army War College (AWC), Command & General Staff College (C&GSC), and Defense Systems Management College (DSMC). Applies to officers and warrant officer student records only.
 - **Course Type “W”** – Courses that are directly attributable to a weapon system are coded “W.” This course type supersedes any of the other course types. For example, if a course type of AIT and W are applicable, the course type of W is always used.
- The additional processing steps are incorporated.
- **Grade Level floor and ceilings** – for certain classes an allowable floor/ceiling grade level is used to prevent attendance anomalies for impacting training costs in a way that is not realistic.
- **3-year averaging** – because attendance data for a course can vary widely from one year to the next a 3-year average is used to increase the consistency of a cost element year over year.
- **PP/Group/Subgroup assignments** – Whenever possible a subgroup assignment using the ATRRS attendance data or assumed subgroup based on the course information is used. However, this is not always possible.
- **Pay Plan** - Training costs are assigned to an entire pay plan at the grade level they are incurred for large-scale general training events such as Basic Training.
- **Group** – Training costs are assigned to an entire group when it is clear the training class applies to that group, but it is not specific enough to apply to a subgroup.

- Subgroup – when the subgroup is clearly identified in the course title, or it can be inferred the subgroup based on the course description or other available information then a subgroup is assigned.

ACTUAL COST OF EACH TRAINING TYPE

Description

The actual cost of training is provided for users who wish to use actual amounts instead of the AMCOS computed average

Business Logic

Use the ATRM-159 (cost), ATRRS (attendance) and PB (budget/actuals) to arrive at specific cost estimates for each cost element.

Basis of Computation

- Actual Cost of Basic Training = Course Type (CT) B Costs * (3-yr PB Avg for Recruiting Training / CT-B)
- Actual Cost of Career Training & Actual Cost of Professional Training = CT P/C respective Costs * (3 yr PB Avg for Professional Development Education / CT P+C)
- Actual Cost of Initial Entry Training & Actual Cost of Advanced Individual Training = CT IET/AIT respective Costs * (3 yr PB Avg for Specialized Skill Training / CT AIT+IET)
- Actual Cost of One Station Unit Training = CT-OSUT Costs * (3 yr PB Avg for OSUT / CT-OSUT)
- Actual Cost of Other Flight Training = CT F Costs
- Actual Cost of Weapon Specific Training = CT W Costs
- Actual Cost of Officer's Undergraduate Pilot Training = CT O Costs

Note All the above PB adjustments use OMA to adjust ATRM/ATRRS computed OMA costs. MPA costs are then adjusted via the same ratio

There is no Actual Cost of General Training or Actual cost elements for NG/R elements. These are described in the next section

Source

HQ TRADOC, DCS G-8, PAE's Army Training Resource Management (ATRM)

ATRM-159 Report, Army Training Requirements and Resources System (ATRRS) data, & the President's Budget.

AVG COST OF EACH TRAINING TYPE

Description

The average cost of training uses the CGLA process to allocate the benefit of training costs in a given year for a given grade level and subgroup to each subsequent grade level in that same subgroup. The numerator (course costs) and denominator (inventory) is averaged across a three year window to smooth costs.

Business Logic

CGLA (of each training cost)

Basis of Computation

- MPA/OMA/OMA_1 APPNs:
- Avg Cost of Basic Training = CGLA (Avg Cost of Basic Training)
- Avg Cost of Career Training = CGLA (Avg Cost of Career Training)
- Avg Cost of Initial Entry Training = CGLA (Avg Cost of Initial Entry Training)
- Avg Cost of Initial Skill Training = CGLA (Avg Cost of Initial Skill Training)
- Avg Cost of Officer's Undergraduate Pilot Training = CGLA (Avg Cost of Officer's Undergraduate Pilot Training)
- Avg Cost of One Station Unit Training = CGLA (Avg Cost of One Station Unit Training)
- Avg Cost of Other Flight Training = CGLA (Avg Cost of Other Flight Training)
- Avg Cost of Professional Training = CGLA (Avg Cost of Professional Training)
- Avg Cost of Training = CGLA (Avg Cost of Training)
- Avg Cost of Weapon Specific Training = CGLA (Avg Cost of Weapon Specific Training)
- Note: in the spring 2021 release the calculation was adjusted such that 152E/F/H NOW/RWO costs were averaged together to eliminate huge costs swings across Apache pilots due to inventory and courses moving between them
- Avg Cost of General Training = CGLA ((OMA training budget – Sum(all training actuals)) / Active Inventory)
- NGPA/OMNG
- Avg Cost of General Training = 3 yr avg PB budget for Training Support and Special Skills training / National Guard (NG) Inventory

Source

Actual Cost of Training & the President's Budget

CATEGORY – VETERAN BENEFITS

VETERANS' BENEFITS (CASH AND IN-KIND)

Description

The Full Cost of Manpower (FCOM) takes the total cost of Veterans' Benefits (Cash and In-Kind) to includes medical care, education, pensions, burial, disability, insurance, and housing costs and divided by the number of veterans. Apply this factor as a fixed dollar amount to all active duty pay plans (AE, AO & AWO) and grades.

Business Logic

AMCOS includes the current FYs constant cost value based on the Full Cost of Manpower (FCoM) model. FCOM factors provide a per capita cost for each service member based on Veteran Administration (VA) budget submission data and estimated veteran populations.

Basis of Computation

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

$$[\text{VA Total FY Expenditures}] / [\text{EOY VA Population on 30 Sep}].$$

Apply cost as a constant value for all active duty pay plans and grades; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

INTRODUCTION – CIVILIAN AND CONTRACTOR

GENERAL INFORMATION

This section addresses the civilian and contractor cost elements spread across fifteen AMCOS civilian pay plans. Each cost element is associated with a Category and an Appropriation (APPN), followed by a Description, Business Logic, Basis of Computation, and Source from which the calculation obtained data for its computation of costs.

One cost summary view (Default) is available for civilian GS, GL, GG, and Wage pay plans in AMCOS LITE. The GP and seven Acquisition pay plans only display the Default summary. Each summary generates a cost table discussed briefly below:

- **The DEFAULT Summary is a standard set of cost elements used for Cost Benefit Analyses (CBAs). AMCOS LITE DEFAULT Summary cost results match AMCOS Project Manager and Xwalk cost results when applying the same selection criteria.**

Throughout the civilian and contractor portion of this document, AMCOS refers to Pay Plans and Appropriations (APPN) using the following names and acronyms.

PAY PLANS ACRONYMS

Use the following acronyms for each Pay Plan. All are calculated annually except where otherwise indicated.

- **G Pay Plans (includes OPM Special pay for applicable series and locations for GS and GL)**
- **General Schedule (GS)**
- **Intelligence Service (GG)**
- **Physician and Dentist (GP)**
- **Law Enforcement (GL)**
- **Wage Pay Plans**
- **Appropriated Funds (AF) include those shown in the table below**

Type	Pay Plan	Leader	Supervisory	Non-supervisory
Wage not otherwise designated	WB			
Trainees	WT			
Lock & Dam	WO	✓		
	WA		✓	
	WY			✓
Hopper Dredge	WJ		✓	
	WH			✓
Production Facilities	WN		✓	
	WD			✓
Floating Plant	XG	✓		
	XH		✓	
	XF			✓
Flood Control	XT	✓		
	XU		✓	
	XR			✓
Puerto Rico Special Schedule	WR	✓		
	WQ		✓	
	WU			✓

- **Non-Appropriated Funds (NAF)**
- **Civilian Child and Youth Programs (CY)**

- Others shown in the table below

Pay Plan	Leader	Supervisory	Non-supervisory	Pay Band
NL	✓			
NS		✓		
NA			✓	
NF				✓

- Contractor Cost Estimate (CCE)
- Acquisition Demo Pay Plans
- NH - Business & Tech Mgt Professional
- NJ - Technical Management Support
- NK - Administration Support
- Laboratory Demo Pay Plans – these plans are based on Science and Technology Reinvention Laboratory (STRL) pay schedules and thus are further broken down by STRL in AMCOS inside each pay plan.
- DB - Demo Engr & Scientists
- DE - Demo Engr & Scientists Tech
- DJ - Demo Administrative
- DK - Demo General Support
- Senior Executive Schedule (SES)
- Other Civilian Plans
- Administratively Determined (AD)
- Board of Contract Appeals (CA)
- Expert (EE) - Hourly
- Consultant (EF) - Hourly
- Executive (EX)
- Senior Intelligence Executive Service (IE)
- Inspectors General (IG)
- Senior Intelligence Professional (IP)
- Senior Level Positions (SL)
- Scientific and Professional (ST)
- Non-Applicable (ZZ)

APPROPRIATIONS (APPN) ACRONYMS

Use the following acronyms for each APPN:

- **Civilian Pay (CivPay)**
- **Operations and Maintenance Army (OMA)**
Operations and Maintenance Federal (Federal OM)

ASSOCIATION OF APPN TO AMCOS CATEGORIES

The chart below provides an overview of each civilian pay plan's category to APPN association.

Civilian & Contractor

CATEGORY – BENEFITS

Under this category, the following cost elements include:

AVG ANNUALIZED COST OF FICA

Description

The Wage Board (WB) Avg Cost of FICA is the employer's share for funds paid to the Social Security Administration (SSA) for Federal Insurance Contribution Act (FICA) tax. Calculate this cost element by multiplying the current FICA Load Factor Percentage by the civilian pay plan's weighted pay for each occupational series. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. The Wage Board FICA EORS are 12QC, 15QC, and 17QC. The GFEBS field used instead of EOR is Cost Element. The Cost Element for FICA is 6400.12Q0.

Business Logic

The DASA-CE-provided Wage Board (WB) FICA value is a percentage which is the result of total WB FICA dollars divided by total WB Basic Pay dollars. The AMCOS model approach applies the calculated WB percentage based on total Army WB FICA expenditures uniformly with up to the maximum salary cap by multiplying the WB FICA factor and the sum of WB Base Pay + WB Premium Pay + WB Cash Awards.

Visit the Social Security Administration (SSA) website annually to verify and change the FICA maximum salary cap value, if needed.

Basis of Computation

Avg Annualized Cost of FICA = [(Avg Cost of Base Pay (Civilian)) + (Avg Cost of Premium Pay) + (Avg Cost of Cash Awards)] * [Wage Board FICA rate].

Source

DASA-CE provides the percentage factors based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINs (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS (Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors. Also, go to the Social Security Administration (SSA) website for the Federal Insurance Contribution Act (FICA) for the maximum salary cap, the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate, and the Medicare Hospital Insurance (HI – 1.45%) tax rate can serve as a backup factor.

AVG COST OF ARMY-FUNDED RETIREMENT (NON-WAGE)

Description

The SES Avg Cost of Army-Funded Retirement is the employer's share for the Civilian Civil Service Retirement System (CSRS) and Civilian Federal Employees Retirement System (FERS) Basic Benefit Plan coverage. Calculate this cost element by multiplying the current Army-Funded Retirement Load Factor Percentage by the civilian pay plan's weighted base pay for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. Sum the SES Army-Funded Retirement EORs 12LF, 15LF, 17LF, 12XF, 15XF, 17XF, 12YF, 15YF, and 17YF to obtain the cost element's total reported costs. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.12Y0 [EmpShrFERS-TSP], 6400.12L0 [Civ Ret CSRS], and 6400.12X0 [Civ Ret FERS]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Army-Funded SES Retirement Load Factor Percentage by the civilian SES pay plan's weighted pay for each SES occupational series.

Basis of Computation

Avg Cost of Army-Funded Retirement = [Avg Cost of Base Pay (Civilian)] * [Army-Funded Retirement SES Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF ARMY-FUNDED RETIREMENT (WAGE)

Description

The Wage Board (WB) Avg Cost of Army-Funded Retirement is the employer's share for the Civilian Civil Service Retirement System (CSRS) and Civilian Federal Employees Retirement System (FERS) Basic Benefit Plan coverage. Calculate this cost element by multiplying the current Army-Funded Retirement Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. Sum the WB Army-Funded Retirement EORs 12LC, 12XC, 12YC, 15XC, 15YC, 17XC, 17YC to obtain the cost element's total reported costs. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.12Y0, [EmpShrFERS-TSP 6400.12L0, [Civ Ret CSRS] and 6400.12X0 [Civ Ret FERS]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Army-Funded Wage Board (WB) Retirement Load Factor Percentage by the civilian WB pay plan's weighted pay for each grade.

Basis of Computation

Displayed WB Value:

Avg Cost of Army-Funded Retirement = [Avg Cost of Base Pay (Civilian)] * [Army-Funded Retirement WB Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS (Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF BENEFITS

Description

Calculate the GS Avg Cost of Benefits by multiplying the current Benefits Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. Sum the GS Avg Cost of Benefits EORs 12EB, 12FB, 12KB, 12LB, 12MB, 12NB, 12NZ, 12QB, 12SB, 12XB, 12YB, 158B, 15BB, 15CB, 15EB, 15KB, 15LB, 15MB, 15NB, 15NZ, 15QB, 15SB, 15XB, 15YB, 17BB, 17CB, 17EB, 17KB, 17LB, 17MB, 17NB, 17NZ, 17QB, 17SB, 17XB, and 17YB to obtain the cost element's total reported costs. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.11E0 [Civ Holiday Pay], 6100.12E0 [Civ Uniform Allowance], 6100.12A1 [PCS Temp Qtrs Subsistence], 6100.12A2 [Civ PCS Real Estate], 6100.12A3 [Civ PCS Other Benefit], 6100.12A4 [Civ Relocation Income Tax], 6100.12A5 [Civ PCS Relocation Service Companies], 6100.12A6 [PCS Civ Relocation Bonus], 6100.12B0 [Civ Overseas Allowance], 6100.12C0 [Civ Non Foreign Cost of Living], 6100.12D0 [Civ Uniform Allowance], 6100.12F0 [Civ Recruitment Bonuses], 6100.12S2 [Civ Benefits Not Otherwise], 6400.12Y0 [Civ Employer's Share Thrift], 6400.12K0 [Civ Employer's Share Life Insurance], 6400.12L0 [Civ Employer's Share CSRS], 6400.12M0 [Civ Employer's Share NAF Retirement], 6400.12N0 [Civ Employer's Share Health Benefits], 6400.12Q0 [Civ Social Security], and 6400.12X0 [Civ Retirement FERS]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Benefits Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

✓ **Basis of Computation**

Avg Cost of Benefits = [Avg Cost of Base Pay (Civilian) including Locality Pay] * [Benefits Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS (Defense Finance & Accounting System) and ODS, Operational Data. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF CIV EMPLOYER SHARE FEGLI (LIFE INSURANCE) (6400.12K0)

Description

GFEBS reports Civ Employer Share Fed Employees Group Life Insurance (FEGLI) in GFEBS EOR Code 6400.12K0, which is for the employer's share of group life insurance coverage. EF and EE pay plans are ineligible for this based on the Financial Management Regulation (FMR)

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable). For each level drilled down to, compute an average "weighted" cost by dividing the total reported cost by the total reported inventory count for the selected Occupational Group or Series, Location, and STRL (if applicable) level.

✓ **Basis of Computation**

Displayed Value: Civ Employer Share Group Life Insurance (6400.12K0) = [Based on user selections, sum of Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6400.12K0 for this cost element.

AVG COST OF CIV EMPLOYER SHARE FEHB (HEALTH BENEFIT INSURANCE) (6400.12N0)

Description

GFEBS reports Civ Employer Share FEHB (Fed Employees Group Health Benefit Insurance) GFEBS EOR Code 6400.12N0, which is for the employer's share of group health insurance coverage. EF and EE pay plans are eligible for this but only if they work at least 130 hours per month. Since AMCOS uses one pay period from GFEBS we check for at least 65 hours.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, compute an average “weighted” cost by dividing the total reported cost by the total reported inventory count.

Basis of Computation

Displayed Value:

Civ Employer Share FEHB (6400.12N0) = [Based on user selections, sum of Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable) drilled down to)] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6400.12N0 for this cost element.

AVG COST OF CIV EMPLOYER SHARE FICA / MEDICARE (6400.12Q0)

Description

The GP Civ Employer Share FICA / Medicare (6400.12Q0) is the employer’s share for funds paid to the Social Security Administration (SSA) for Federal Insurance Contribution Act (FICA) tax. Calculate this cost by multiplying the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate up to the maximum cap plus multiplying all income (without a maximum limit) by the Medicare Hospital Insurance (HI – 1.45%) tax rate.

Business Logic

Calculate by multiplying income (Base Pay + Market Pay) by the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate up to the maximum cap plus multiplying all income (without a maximum limit) by the Medicare Hospital Insurance (HI – 1.45%) tax rate.

Basis of Computation

Displayed GP Value:

Civ Employer Share FICA / Medicare (6400.12Q0) = [(Civ Base Pay) + (Civ Physical Comparability Pay)] * (6.2% FICA rate up to maximum cap)] + [(Civ Base Pay) + (Civ Physical Comparability Pay)] * (1.45% FICA rate without a maximum limit)]. Expressed costs as an annual amount.

Source

Social Security Administration (SSA) Federal Insurance Contribution Act (FICA) for the maximum salary cap, the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate, and the Medicare Hospital Insurance (HI – 1.45%) tax rate.

AVG COST OF CIV EMPLOYER SHARE FICA / MEDICARE (6400.12Q0)

Description

The Acquisition pay plans Civ Employer Share FICA / Medicare (6400.12Q0) is the employer's share for funds paid to the Social Security Administration (SSA) for Federal Insurance Contribution Act (FICA) tax. This cost includes the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate up to the maximum cap plus multiplying all income (without a maximum limit) by the Medicare Hospital Insurance (HI – 1.45%) tax rate.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, compute an average “weighted” cost by dividing the total reported cost by the total reported inventory count for the selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

Civ Employer Share FICA / Medicare (6400.12Q0) = [Based on user selections, sum of Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable) drilled down to)] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6400.12Q0 for this acquisition cost element. EF and EE pay plans are ineligible for this based on the Financial Management Regulation (FMR)

AVG COST OF CIV EMPLOYER SHARE RETIREMENT (6100.12Y0), 6400.12X0, 6400.12L0, & 6400.12M0)

Description

AMCOS provides Civ Employer Share for Retirement based on four GFEBS reported cost elements to include:

- **Civ Employer Share FERS-TSP (Thrift Savings Plan) in GFEBS EOR Code 6100.12Y0.**
- **Civ Employer Share FERS (Fed Employees Retirement System) in GFEBS EOR Code 6400.12X0.**
- **Civ Employer Share FERS-CSRS (Civil Service Retirement System) in GFEBS EOR Code 6400.12L0.**
- **Civ Employer Share Retirement TSP (Thrift Savings Plan) in GFEBS EOR Code 6400.12M0.**
- **For Personnel IDs that do not report GFEBS contributions (non-participants), AMCOS will provide an average cost based on two FERS reported GFEBS EOR Codes 6100.12Y0 (Civ Employer Share FERS-TSP) and 6400.12X0 (Civ Employer Share FERS).**

Civ Employer Share for Retirement is for the automatic contribution and employers' matching contribution for FERS and CSRS employees. Includes amount paid by an employer for fiduciary insurance.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, compute an average “weighted” cost by dividing the total reported cost by the total reported inventory count for the selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

Civ Employer Share Retirement (6100.12Y0, 6400.12X0, 6400.12L0, 6400.12M0) = [Based on user selections, sum of Annualized Civilian costs of EORs (6100.12Y0 + 6400.12X0 + 6400.12L0 + 6400.12M0) for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to]] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EORs) 6100.12Y0, 6400.12X0, 6400.12L0, and 6400.12M0 for this cost element.

AVG COST OF CIV NON-FOREIGN COLA (COST OF LIVING ALLOWANCE) PAY (6100.12C0)

Description

GFEBS reports Civ Non-Foreign COLA (Cost of Living Allowance) Pay in GFEBS EOR Code 6100.12C0, which is for the costs an agency paid for allowances based on living costs and conditions of environment; employees stationed outside the continental United States or in Alaska (see 5 U.S.C. 5941).

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, compute an average “weighted” cost by dividing the total reported cost by the total reported inventory count for the selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

Civ Non-Foreign COLA (Cost of Living Allowance) Pay (6100.12C0) = [Based on user selections, sum of Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to]] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.12C0 for this cost element.

**AVG COST OF CIV O/S ALLOWANCES (CIV QUARTERS, COLA, LQA, & OTHER NOT CLASSIFIED)
(6100.12B0)**

Description

GFEBs reports Civ Overseas Allowances (Civ Quarters, COLA, LQA, & Other not classified) in GFEBs EOR Code 6100.12B0, which is for All Civilian Overseas Allowances to include Civilian Quarters (see 5 U.S.C. 5923), Cost of Living Allowances paid to civilian employees stationed in foreign areas, and Other Overseas Not Otherwise Classified.

Business Logic

Initially derive an annualized cost for every reported GFEBs position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, AMCOS computes an average "weighted" cost by dividing the total reported cost by the total reported inventory count for the same selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

**Civ Overseas Allowances (Civ Quarters, COLA, LQA, & Other not classified) (6100.12B0)
= [Average cost based on user selections which sum the Annualized Civ costs for the
level drilled down to (Occupational Group or Series, Location, and STRL (if applicable))
drilled down to]] divided by the (Total reported inventory count for that same level)].**

Source

GFEBs Query - DASA-CE pulls GFEBs Element of Resource (EOR) 6100.12B0 for this cost element.

AVG COST OF FEDERAL EMPLOYEES GOV'T LIFE INSURANCE (G SERIES)

Description

The GS Avg Cost of Federal Employees Gov't Life Insurance (FEGLI) cost factor is the employer's share of group life insurance coverage. Calculate GS costs by multiplying the current FEGLI Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBs costs by the total basic pay costs. The specific reported GFEBs cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Table. The GS Federal Employees Gov't Life Insurance EORs are 12KB, 15KB, and 17KB. The GFEBs field used instead of EOR is Cost Element. The Cost Element equivalent is 6400.12K0. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Federal Employees Gov't Life Insurance (FEGLI) Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

Basis of Computation

**Avg Cost of Federal Employees Gov't Life Insurance (FEGLI) = [Avg Cost of Base Pay
(Civilian) including Locality Pay] * [FEGLI Load Factor Percentage].**

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF FEDERAL EMPLOYEES GOV'T LIFE INSURANCE (SES)

Description

The SES Avg Cost of Federal Employees Gov't Life Insurance (FEGLI) cost factor is the employer's share of group life insurance coverage. Calculate SES costs by multiplying the current FEGLI Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. The SES Federal Employees Gov't Life Insurance EOR is 12KF. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalent is 6400.12K0. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Federal Employees Gov't Life Insurance (FEGLI) Load Factor Percentage by the civilian SES pay plan's weighted pay for each SES position.

Basis of Computation

Avg Cost of Federal Employees Gov't Life Insurance (FEGLI) = [Avg Cost of Base Pay (Civilian)] * [FEGLI Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF FEDERAL EMPLOYEES GOV'T LIFE INSURANCE (WAGE)

Description

The Wage Board (WB) Avg Cost of Federal Employees Gov't Life Insurance (FEGLI) cost factor is the employer's share of group life insurance coverage. Calculate WG costs by multiplying the current FEGLI Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the

total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Table. The WG Federal Employees Gov't Life Insurance EORS are 12KC, 12KK, 15KC, 15KK, and 17KC. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalent is 6400.12K0.

Business Logic

Calculate by multiplying the current Federal Employees Gov't Life Insurance (FEGLI) Load Factor Percentage by the civilian Wage Board (WB) pay plan's weighted pay.

Basis of Computation

Displayed Wage Board (WB) Value:

Avg Cost of Federal Employees Gov't Life Insurance (FEGLI) = [Avg Cost of Base Pay (Civilian)] * [FEGLI WB Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF FEDERAL EMPLOYEES GOV'T HEALTH INSURANCE (SES & WAGE)

Description

The Avg Cost of Federal Employees Gov't Health Insurance (FEGHI) cost factor is the employer's share of group health insurance coverage. Calculate costs by multiplying the current OPM biweekly government contributions for self plus one. Self plus one was chosen because AMCOS does not receive dependent data for civilians, so we use the middle ground between no dependents and multiple dependents

Business Logic

Calculate by multiplying the current OPM biweekly maximum self plus one by 26.

Basis of Computation

self plus one (per pay period) * 26

Source

OPM Healthcare Premiums maximums

AVG COST OF FICA

Description

The SES Avg Cost of FICA is the employer's share for funds paid to the Social Security Administration (SSA) for Federal Insurance Contribution Act (FICA) tax. Calculate SES Avg Cost of FICA cost by multiplying the current FICA Load Factor Percentage by the civilian pay plan's weighted pay for each occupational series. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. The SES FICA EOR is 12QF. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalent is 6400.12Q0.

Business Logic

The DASA-CE provided Senior Executive Service (SES) FICA value is a percentage which is the result of the total SES FICA dollars divided by total SES Basic Pay dollars which results in a lower FICA percentage. Typically, a position is taxed up to the maximum salary cap which limits the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate to that max cap; only Medicare Hospital Insurance (HI – 1.45%) tax rate should be taxed beyond the maximum limit. The AMCOS model approach applies the lower calculated SES FICA percentage to all income uniformly by multiplying the SES FICA factor and the sum of SES Base Pay + SES Cash Awards.

Basis of Computation

Displayed SES Value:

Avg Cost of FICA = [(Avg Cost of Base Pay (Civilian)) * (1 + Avg Percentage Cost of Cash Awards)] * [SES FICA rate].

 **NOTE:** The SES FICA calculation excludes the SSA's FICA maximum salary cap, the Old Age, Survivor Disability Insurance (OASDI – 6.2%) tax rate, and Medicare Hospital Insurance (HI – 1.45%) tax rate. Visit the Social Security Administration (SSA) website annually to verify and change the FICA maximum salary cap value, if needed.

Source

DASA-CE provides the percentage factors based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINs (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF FORMER EMPLOYEE COMPENSATION

Description

Former employee compensation provides severance pay and separation incentives VERA and VSIP to former employees. Severance pay information can be found under 5 U.S.C. 5595, (Reference (B)). Employees are entitled to severance pay in regular pay period intervals and amounts equal to that paid

before separation (DoD 7000.14-r_) VERA/VSIP incentives are paid to encourage retirement/resignation at bases that are closing or undergoing a major civilian reduction, as authorized in P.L. 102-484 (5 U.S.C. 5597). Calculate the GS Avg cost of former employee compensation cost element by multiplying the current former employee compensation load factor percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specifics reported in GFEBS for this cost element is based on the DFAS-in Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORS used are 13UB and 13ZB. The GFEBS field used instead of EOR is cost element. The cost element equivalents are 6400.13U0 and 6400.13Z0. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Former Employee Compensation Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

Basis of Computation

Displayed GS Value:

Avg Cost of Former Employee Compensation = [Avg Cost of Base Pay (Civilian) including Locality Pay] * [Former Employee Compensation Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF MISCELLANEOUS PAY

Description

The Wage Board (WB) Avg Cost of Miscellaneous Pay cost factor includes All Civilian Overseas Allowances, Civilian Uniform Allowance, Civilian Retention and Recruitment Incentives, Civilian PCS, and Civilian PCS Incentives. Calculate the WG cost by multiplying the current Miscellaneous Pay Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. The Wage Board Miscellaneous Pay EORS are 12DC, 15DC, 17DC, 12BC, 15BC, 17BC, 12EC, 12FC, 15EC, 17EC, 122C, 123C, 124C, and 128C. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.12A3 [Civ PCS Other Benefits], 6100.12A6 [Civ PCS Relocation Bonus], 6100.12B0 [Civ Overseas Allowance], 6100.12E0 [Civ Uniform Allowance]. Sum the cost elements to obtain a total cost.

Business Logic

Calculated by multiplying the current Wage Board (WB) Miscellaneous Pay Load Factor Percentage by the civilian WG pay plan's weighted pay for each WG grade.

Basis of Computation

Displayed Wage Board (WB) Value:

Avg Cost of Miscellaneous Pay = [Avg Cost of Base Pay (Civilian)] * [WB Miscellaneous Pay Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBs combined with legacy system files, e.g., STANFINs (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS (Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

CATEGORY – CASH AWARDS

Under this category, the following cost element names include:

AVG COST OF CASH AWARDS (G SERIES)

Description

Calculate the GS Avg Cost of Cash Awards by multiplying the current Cash Awards Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11KB, 11SB, 14KB, and 16KB. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.11K0 [CivCshAwrPay] and 6100.11S0 [CivPerCshAwrPy]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Cash Awards Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

Basis of Computation

Displayed GS Value:

$$\text{Avg Cost of Cash Awards} = [\text{Avg Cost of Base Pay (Civilian) including Locality Pay}] * [\text{Cash Awards Load Factor Percentage}].$$

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF CASH AWARDS (SES)

Description

Calculate the SES Avg Cost of Cash Awards by multiplying the current of Cash Awards Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11KB, 11SB, 14KB, and 16KB. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.11K0 [CivCshAwrPay] and 6100.11S0 [CivPerCshAwrPy]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Cash Awards Load Factor Percentage by the civilian SES pay plan's average pay.

Basis of Computation

Displayed SES Value:

Avg Cost of Cash Awards = [Avg Cost of Base Pay (Civilian)] * [Cash Awards Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF CASH AWARDS (WAGE)

Description

Calculate the Wage Board (WB) Avg Cost of Cash Awards by multiplying the current of Cash Awards Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade.

 Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11KC, 14KC, and 16KC. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalent is 6100.11K0 [CivCshAwrPay]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current WB Cash Awards Load Factor Percentage by the civilian pay plan's weighted pay for each WB grade.

Basis of Computation

Displayed Wage Board (WB) Value:

Avg Cost of Cash Awards = [Avg Cost of Base Pay (Civilian)] * [WB Cash Awards Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a

budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF CIV CASH AWARDS (6100.11K0)

Description

GFEBS reports Civilian Cash Awards Pay in GFEBS EOR Code 6100.11K0, which is for civilian incentives and other cash awards paid under the Incentive Awards Program and other, non-performance awards. The percentage used is adjusted annually based on reported cash awards. For AD, GP, D, and N series they share the same figure while all other GFEBS based plans use a percentage based on that pay plan's total cash awards against base pay.

Business Logic

Utilize cash award figures from the prior year to determine a set percentage to use from the upcoming year.

Basis of Computation

Displayed Value:

Civ Cash Awards Pay = [(Weighted Civ Base Pay) + (Market Pay)] * Cash Awards Percentage].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11K0 for this GP cost element. Base costs on actual GFEBS reported civilian pay data. For AD, GP, D and N series this comes from Appendix A on the Army Civilian Pay Website.. For all other GFEBS based pay plans this comes from GFEBS reported cash awards divided by base pay by pay plan.

CATEGORY – COMPENSATION (CCE ONLY)

Under this category, the following cost element names include:

AVG COST OF BENEFITS (CCE ONLY)

Description

Employer Costs for Employee Compensation (ECEC), a product of the National Compensation Survey, measures employer costs for wages, salaries, and employee benefits for nonfarm civilian workers, private industry, and state & local Government workers. AMCOS uses the private industry ECEC benefit factors.

Business Logic

Employer Costs for Employee Compensation (ECEC) data on total compensation, wages, and salaries, and benefits in private industry reports annually for 15 metropolitan areas, typically in March.

Basis of Computation

The Benefits percentage includes Paid Leave, Supplemental Pay, Insurance, Retirement, and Savings Legally required. AMCOS applies the total percentage to the reported Bureau of Labor Statistics (BLS) salary data.

Source

Bureau of Labor Statistics website: http://www.bls.gov/schedule/archives/ecec_nr.htm

AVG COST OF SALARY (CCE ONLY)

Description

Annual salary received in the private sector. BLS collects data on occupational employment and wages from employers of every size, in every state, in metropolitan and nonmetropolitan areas, in all industry sectors. These estimates are cross-industry estimates; each occupation's employment and wage estimates calculate from data collected from employers in all industry sectors. Self-employed persons are not included in the survey or estimates.

Business Logic

Bureau of Labor Statistics (BLS) uses Standard Occupational Classifications (SOC) to identify Private Labor Market (PLM) occupation salary ranges. Military MOSs/AOCs salaries map to Standard Occupational Classifications (SOCs) and to Civilian GS, WG, WL, and WS Occupational (OCCs) Series. For more information on BLS SOCs, go to the following link: http://www.bls.gov/oes/current/oes_abo.htm for National, State, Metropolitan, and Nonmetropolitan Area Occupational Employment and Wage Estimates.

Basis of Computation

AMCOS makes no calculations; all data presented is BLS sourced. BLS OES salary data is presented in five percentile ranges, 10, 25, 50 (Median), 75, and 90 percentiles.

Source

Bureau of Labor Statistics website: http://www.bls.gov/oes/current/oes_abo.htm

CATEGORY – COMPENSATION - BASIC

Under this category, the following cost element names include:

AVG COST OF BASE PAY (GFEBS BASED)

Description

DASA-CE provides the SES Base Pay and inventory data from GFEBS. The calculation methodology has changed to accommodate a performance-based pay system for members of the Senior Executive Service. AMCOS provides three (3) rates, Minimum, Average, and Maximum whether the value is for ALL SES positions or a specific occupational series.

Business Logic

Due to the low inventory spread across many Occupational Series, AMCOS provides three values to establish a range of salaries for each SES Occupational Series with inventory. The SES salaries values are Minimum, Average, and Maximum. DASA-CE downloads and provides the GFEBS SES inventory and salary data for the most recently complete FY.

Basis of Computation

For each SES Occupational Series with reported inventory, AMCOS provides three values to create an annual salary range for SESs; they are Minimum, Average, and Maximum.

- **Law establishes the Minimum salary – For SES positions, this is the lowest annual salary reported for an occupational series. AMCOS makes no calculation; the minimum is simply the lowest value reported for the occupational series or lowest value for all reported positions depending on the user selections made.**
- **Weighted average salary - Multiply the annual pay rate by the inventory present in each Occupational Series to produce an annual total for that series. All values (multiplication products) calculated with inventory present are then divided by the total inventory for the series to produce an Average Cost of Base Pay for the Series.**
- **Law establishes the Maximum salary – For SES positions, this is the highest annual salary reported for an occupational series. AMCOS makes no calculation; the maximum is simply the highest value reported for the occupational series or highest value for all reported positions depending on the user selections made.**

Source

DASA-CE provides Jan or Feb SES salary data from the current fiscal year.

For reference purposes, the specific Minimum / Maximum salary limits go to the OPM website then look for the Executive & Senior Level Employee Pay Tables links and look for the limits for Agencies with a Certified SES Performance Appraisal System.

AVG COST OF BASE PAY (PAY SCHEDULE BASED)

Description

WG (Wage Grade), WL (Wage Leader), and WS (Wage Supervisor), commonly referred to as the “blue-collar” workers, have their pay based on the prevailing rates on an area basis. This specific pay system covers trade, labor, and other blue-collar jobs for nearly 140 wage areas maps; the maps number range

from 001 – 151. The WG & WL pay scales have 15 grades and the WS pay scale has 19 grades with each grade further divided into 5 steps. Wage base pay includes the salary rates for each wage series hourly pay table for the specific locality area. Area map tables are identified by a 3-digit number followed by an alpha character ("R" = Regular Area, "F" = Floating Plant, or "L" = Lock & Dam. AMCOS only uses the "R" coded WG, WL, and WS "Regular" pay schedules. The L & F pay schedules do NOT apply to AMCOS covered WG, WL or WS pay plans. The L & F pay schedules apply to wage plans like XF, XG, XH, WY, WO, and WA.

 **NOTE:** Base the annual wage salary on 2087 hours.

Business Logic

AMCOS calculates a weighted average base pay for each grade across all five steps with inventory. The inventory figures used are the Defense Manpower Data Center (DMDC) report from the most current fiscal year. This method of averaging allows for differences in Steps among the population of Civilian WGs that are in the Army.

NOTE: When DMDC reports Step = 42, this means the specific step of five Wage steps is unknown. None of the WG, WL, and WS pay plan makes an assumption to assign a mid-point step and then perform the weighted base pay calculations. This prevents skewing the weighted pay either lower or higher arbitrarily. Instead, AMCOS excludes the record with the unknown step from the inventory count for the weighted pay calculation.

Basis of Computation

NOTE: To be consistent with the annual Wage and GS pay schedule tables, AMCOS uses the annual wage salary based on 2087 hours.

Multiply the annual salary by the inventory present in each Step to produce an annual pay rate for each Step within the grade. All values (multiplication products) calculated for Steps with inventory present (1 or >) are summed for the entire grade, and then divided by the total area map inventory for the grade to produce an Average Cost of base Pay (Civilian) for the grade.

Source

The DoD Defense Civilian Advisory Service (DCPAS) link for Federal Wage System (FWS) Salary Schedules for Appropriated Funds WG, WL, WS Regular, Lock & Dam, and Floating Plant pay schedules) is <http://www.cpms.osd.mil/Subpage/Wage>. Download files from <https://www.cpms.osd.mil/WageData/regmod/>. AMCOS only uses the "R" coded WG, WL, and WS "Regular" pay schedules. The Lock & Dam (L) or Floating Plant (F) pay schedules do NOT apply to AMCOS covering WG, WL, or WS pay plans. L & F pay schedules apply to wage plans like XF, XG, XH, WY, WO, and WA.

AVG COST OF BASE PAY 2

Description

Firefighters on an 80hr or more bi-weekly schedule are paid additional base pay for their work above 80 hours up to 106 hours

Business Logic

Additional hours are computed as if they are additional base pay the firefighter is owed before overtime kicks in.

Basis of Computation

Base Pay / Firefighter hours * Firefighter Base Pay 2 hours * 26 pay periods.

Source

<https://www.dcpas.osd.mil/Content/documents/EC/FederalFirefighterPay.pdf>

AVG COST OF CIV NON-FOREIGN COLA (COST OF LIVING ALLOWANCE)

Description

The U.S. Government pays cost-of-living allowances (COLAs) to white-collar civilian Federal employees in Alaska, Hawaii, Guam and the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands. Section 5941 of title 5, United States Code, and Executive Order 10000 (as amended) authorize the payment of COLAs in nonforeign areas.

Business Logic

The Non-Foreign Cola (NFC) rate is applied to base pay (or special rates if applicable) to compute the NFC cost component

Basis of Computation

Displayed Value:

$$= \text{Base Pay (or special rate if applicable)} * \text{NFC \%}$$

Source

<https://www.opm.gov/policy-data-oversight/pay-leave/pay-systems/nonforeign-areas/>.

AVG COST OF CIV BASE PAY (6100.11B1)

Description

This is the normal Base Pay element used for base pay calculations. It applies to GFEBS based pay plans: GP, D series, N series, CA, EX, IE, IG, SL, ST, ZZ

Business Logic

Use costs reported in GFEBS Codes 6100.11B1 (O/E-Civ BasePay F/T) to calculate an average base pay for each grade with inventory. Since this methodology uses actual per pay-period salary data and when divided by the inventory reported by counting the number of GFEBS positions in the data, the result is the weighted average salary cost.

❗ **NOTE 1:** An average weighted salary cost can be determined down to the lowest Science and Technology Reinvention Laboratory (STRL) for D series pay plans

❗ **NOTE 2:** Collect GFEBS data by pay period (PP). Whether 8 PPs, 20 PPs, or an entire year of 26 PPs are used; the methodology of summing this element's total GFEBS costs and dividing by the total number of reported positions (inventory count) is the same to derives this "weighted" average.

✓ **Basis of Computation**

Sum the grades' Civ Base Pay (6100.11B1) costs then divide by the reported inventory for the grade to calculate a weighted Civ Base Pay at the Occupational Series, State, Grade, or down to the GFEBS Cost Center level which is the lowest level AMCOS displays the data.

Displayed Value:

Civ Base Pay (6100.11B1) = [(Annualized Civ Base Pay by Grade for 6100.11B1)] / [(Total Inventory Count by Grade for 6100.11B1).

Source

GFEBS Query – DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11B1 for this cost element. Base costs on actual GFEBS reported civilian pay data and use to calculate an average "weighted" cost.

AVG COST OF CIV BASE PAY (6100.11B1 & B3)

Description

AMCOS permits data for select pay plans that include non-permanent employees (11B3). We only allow certain pay plans to utilize 11B3 because unless that is standard practice in a pay plan it can produce outliers that negatively influence cost averages. Therefore, only the AD and IP pay plans are allowed

Business Logic

Use costs reported in GFEBS Codes 6100.11B1 & B3 (O/E-Civ BasePay F/T) to calculate an average base pay for each grade with inventory. Since this methodology uses actual per pay-period salary data and when divided by the inventory reported by counting the number of GFEBS positions in the data, the result is the weighted average salary cost.

❗ **NOTE 1:** Collect GFEBS data by pay period (PP). Whether 8 PPs, 20 PPs, or an entire year of 26 PPs are used; the methodology of summing this element's total GFEBS costs and dividing by the total number of reported positions (inventory count) is the same to derives this "weighted" average.

✓ **Basis of Computation**

Sum the grades' Civ Base Pay costs then divide by the reported inventory for the grade to calculate a weighted Civ Base Pay at the Occupational Series, State, Grade, or down to the GFEBS Cost Center level which is the lowest level AMCOS displays the data.

Displayed Value:

$$\text{Civ Base Pay (6100.11B1 \& 3)} = \frac{[(\text{Annualized Civ Base Pay by Grade for 6100.11B1 \& 3})]}{[(\text{Total Inventory Count by Grade for 6100.11B1 \& 3})]}$$

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11B1 for this cost element. Base costs on actual GFEBS reported civilian pay data and use to calculate an average "weighted" cost.

AVG COST OF CIV HOURLY PAY (6100.11B1 & B3)

Description

AMCOS permits data for select pay plans that include non-permanent employees (11B3). We only allow certain pay plans to utilize 11B3 because unless that is standard practice in a pay plan it can produce outliers that negatively influence cost averages. Additionally, some pay plans are not typically full time and thus an hourly figure is more appropriate. Therefore, only the EE and EF pay plans are allowed this cost element.

Business Logic

Use costs reported in GFEBS Codes 6100.11B1 & B3 to calculate an average hourly pay for each grade with inventory.

✓ **Basis of Computation**

Sum the grades' Civ Hourly Pay costs then divide by the reported inventory for the grade to calculate a weighted Civ Hourly Pay at the Occupational Series, Grade, and location level.

Displayed Value:

$$\text{Civ Hourly Pay (6100.11B1 \& 3)} = \frac{[\text{Pay by Grade for 6100.11B1 \& 3}]}{[(\text{Total Inventory Count by Grade for 6100.11B1 \& 3})]}$$

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11B1&3 for this cost element. Base costs on actual GFEBS reported civilian pay data and use to calculate an average "weighted" cost.

AVG COST OF CIV LOCALITY PAY

Description

GFEBS includes locality pay in the Civ Base Pay (6100.11B1) cost element. Calculate Locality Pay & then subtract it from 6100.11B1 Base Pay, and report the locality pay amount as this cost element. Derive Locality Pay based on the GFEBS record's reported zip code, determine the corresponding locality rate, and compute by multiplying the Base Pay by the Locality Rate. Only certain GFEBS pay plans utilize locality pay and they are: D series, N series, and CA.

Note: A few doctor positions (Occupational Series 602) do exist in the acquisition career paths. Doctors receive Physical Comparability Pay (Market Pay) (6100.11T0) in lieu of Locality Pay and AMCOS does not calculate locality pay for 602s.

Business Logic

Determine whether the position receives locality pay or market pay by checking whether Physical Comparability Pay (AKA Market Pay) (6100.11T0) cost element is present for a position number, if so, then do not calculate locality pay.

For all other position numbers:

- **Lookup each GFEBS record's zip code.**
- **Associate the zip code to the OPM locality pay percentage for that record.**
- **Compute the cost using the formula below and then annualize the cost.**

Basis of Computation

If Market Pay > 0, Locality Pay = [null]; i.e., no locality pay will appear in the cost results for the specific criteria selected.

If Market Pay is less than or equal to 0, then Locality Pay looks up the zip code for the GFEBS record and then retrieves the corresponding OPM locality pay percentage = LocPayPerc.

Displayed Value:

$$\text{Locality pay} = \text{Base Pay} - (\text{Base Pay} / (1 + \text{LocPayPerc}))$$

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11B1 for this acquisition cost element & the OPM Locality Pay Area Definitions (<https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/>).

AVG COST OF CIV TITLE 38: MEDICAL PREMIUM PAY (6100.11N0)

Description

GFEBS EOR 6100.11N0 includes Title 38 Medical Premium Pay for employees appointed under 38 USC 7401(1), Physicians, Dentist, Optometrists, Podiatrist, Chiropractors, Physicians Assistants, Nurses (to include APNs). The following acquisition series in OPM Occupational Group 600 were included in the GFEBS data received: 603, 610, 620, 630, 633, 636, 640, 644, & 651.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to compute an average "weighted" cost by dividing the total reported cost by the total reported inventory count for the selected Occupational Group or Series, Location, and STRL (if applicable) level.

✓ **Basis of Computation**

Displayed Value:

Civ Title 38 Medical Premium Pay (6100.11N0) = [Based on user selections, sum of Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to]] divided by the (Total reported inventory count for that same level)].

i **Source**

GFEBs Query - DASA-CE pulls GFEBs Element of Resource (EOR) 6100.11N0 for this cost element.

CATEGORY – COMPENSATION - OTHER

Under this category, the following cost element names include:

AVG COST OF POST (COST OF LIVING) ALLOWANCE

Description

Post Allowance: Commonly referred to as the "cost-of-living" allowance, this is an allowance based on a percentage of "spendable income," i.e. money you can really put your hands on to spend on goods and services. The amount varies depending on salary level and family size. The post allowance is calculated by comparing costs for goods and services in 11 categories - including food (consumed at home or in restaurants), tobacco/alcohol, clothing, personal care items, furnishings, household goods, medical services, recreation, public transportation, vehicle-related expenses, and household help - to the cost of those same goods and services in Washington, D.C.

Business Logic

Utilize the spendable income tables and Post Allowance percentages by location from the Department of State to calculate this cost.

Basis of Computation

Displayed Value:

$$= \frac{\text{Spendable Income (based on base pay \& number of dependents)} * \text{DoS Post Allowance percentage}}{\text{percentage}}$$

Source

<https://aoprals.state.gov>

AVG COST OF POST (HARDSHIP) ALLOWANCE

Description

Post hardship differential is meant to compensate employees for service at places in foreign areas where conditions of environment differ substantially from conditions of environment in the continental United States and warrant additional compensation as a recruitment and retention incentive. It is paid as a percentage of basic compensation in 5, 10, 15, 20, 25, 30 and 35% increments. In addition to being paid to permanently assigned personnel, post differential may also be paid to employees on extended detail either from the U.S. or from foreign posts. See DSSR 500 for further information.

Business Logic

Base pay is multiplied by the DoS rate.

For civilian (G series): base pay is the schedule base pay (no locality areas, no Rest of US)

For Wage (W series): base pay is the Foreign Area hourly rate which is then annualized.

✓ Basis of Computation

Displayed Value:

$$= \text{Base pay} * \text{DoS Post Allowance percentage}$$

Source

<https://aoprals.state.gov>

AVG COST OF LIVING QUARTERS ALLOWANCE

Description

This allowance is granted to an employee to help defray the annual cost of suitable, adequate living quarters for the employee and his/her family at a foreign post where government-leased or -owned housing is not provided. The LQA rates are designed to substantially cover the average employee's costs for rent, utilities, required taxes levied by the local government, and other allowable expenses. Living quarters allowance rates are categorized by "quarters groups" based on the employee's grade level or rank and his/her family size. Additional amounts of up to 10%, 20%, or 30% above the LQA rates may be allowed for larger families. For further information on LQA see DSSR 130. DSSR 136 contains guidance for employees occupying personally owned quarters.

Business Logic

LQA is based on the applicable group and whether the individual is 'with Family' or 'without Family'. The linkage from pay plan, and grade level to group # is taken from the Defense Travel Management Office (DTMO) and shown in the table below.

Quarters Groups	Personnel Classifications						
1	Chief of Mission (22 U.S.C. 802(9) & Career Ambassador (22 U.S.C. 867)						
	FS	GS	AID (FC)	Department of Defense			
2	SFS & 1-2	SES/SL/ST & 14-15	11-14	Wage Grade			DoDDS TP
				WG	WL	WS	
3	3-5	10-13	7-10	14-15	12-15	11-19	Schedule C; Bachelor's Degree; Step 4 and above, and schedules D-F, K, L and M-O.
4	6-9	1-9	1-6	1-13	1-11	1-10	Schedule C; Bachelor's Degree; and Step 1-3.

✓ Basis of Computation

Displayed Value:

$$= \text{DoS value based on the location, applicable group, and whether the number of dependents selected is 0 (without family) or } \geq 1 \text{ (with family)}$$

Sources

<https://aoprals.state.gov> and <https://www.defensetravel.dod.mil/>

AVG COST OF DANGER PAY ALLOWANCE

Description

The danger pay allowance provides additional compensation for employees serving at designated danger pay posts. It is paid as a percentage of basic compensation in 15, 25 and 35% increments. In addition to being paid to permanently assigned personnel, danger pay may also be paid to employees on temporary duty or detail to the post. For those not qualifying for the danger pay allowance described above, a danger pay allowance may be granted to civilian employees who accompany U.S. military forces designated by the Secretary of Defense as eligible for imminent danger pay. The amount of danger pay will be the same flat rate amount as the imminent danger pay amount paid to uniformed military personnel, currently \$225 per month. While uniformed military personnel are paid once every 30 days, civilian employees eligible for this type of danger pay will be paid daily. The two types of danger pay may not be paid simultaneously. See DSSR 650 and DSSR 920, footnotes "p" and "v" for further information.

Business Logic

Base pay is multiplied by the DoS rate.

For civilian (G series): base pay is the schedule base pay (no locality areas, no Rest of US)

For Wage (W series): base pay is the Foreign Area hourly rate which is then annualized.

Basis of Computation

Displayed Value:

$$= \text{Base pay} * \text{DoS Danger Pay percentage}$$

Source

<https://aoprals.state.gov>

AVG COST OF CIV HAZARDOUS DUTY PAY (6100.11H0)

Description

Determine the annualized GFEBS reported Civilian Hazardous Duty Pay (6100.11H0) in EOR Code 6100.11H0. This cost is for an agency to compensate employees who perform hazardous duties such as flying duty as non-crewmembers, parachute jumping, demolition of explosives, handle toxic fuels, and engages in flight deck duty or experimental stress duty). To annualize Hazardous Duty Pay cost, multiply by 26 pay periods.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, compute an average "weighted" cost by dividing the total reported cost by the total reported inventory count for the selected Occupational Group or Series, Location, and STRL (if applicable).

✓ Basis of Computation

Displayed Value:

Civ Hazardous Duty Pay (6100.11H0) = [Based on user selections, sum of Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to]] divided by the (Total reported inventory count for that same level)].

Source

GFEBs Query - DASA-CE pulls GFEBs Element of Resource (EOR) 6100.11H0 for this cost element.

AVG COST OF CIV PHYSICAL COMPARABILITY PAY (MARKET PAY) (6100.11T0)

Description

Annualized the GFEBs reported Civilian Physical Comparability Pay (Market Pay) in EOR Code 6100.11T0 which is a cost an agency paid to recruit and retain highly qualified Government physicians (see 5 U.S.C. 5948).

Business Logic

AMCOS derives an average Market Pay by dividing the total reported Market Pay cost by the total reported inventory count for each level (Occupational Series, Location, and STRL (if applicable) level).

Use costs reported in GFEBs Codes 6100.11T0 to calculate an average Physical Comparability Pay (Market Pay) for each grade (GP12 - GP15) with inventory. Since this methodology uses actual per pay-period Physical Comparability Pay (Market Pay) data and when divided by the inventory reported by counting the number of GFEBs positions in the data, the result is the weighted average Physical Comparability Pay (Market Pay) cost.

❗ **NOTE 1:** An average weighted Physical Comparability Pay (Market Pay) cost can be determined down to the lowest GFEBs Cost Center level.

❗ **NOTE 2:** Collect GFEBs data by pay period (PP). Whether 8 PPs, 20 PPs, or an entire year of 26 PPs are used; the methodology of summing this element's total GFEBs costs and dividing by the total number of reported positions (inventory count) is the same to derives this "weighted" average.

✓ Basis of Computation

Displayed Value:

Civ Physical Comparability Pay (Market Pay) (6100.11T0) = Annualized Sum of Civ Market Pay by level) / (By the total reported inventory count for the same level drilled down to (i.e., Occupational Series, State, Grade, or Cost Center level).

Source

GFEBs Query - DASA-CE pulls GFEBs Element of Resource (EOR) 6100.11T0 for this GP cost element.

AVG COST OF CIV POST DIFFERENTIAL PAY (O/S HARDSHIP POST) (6100.11J0)

Description

Annualized GFEBS reported Civ Post Differential Pay (O/S Hardship Post) in GFEBS EOR Code 6100.11J0. Based upon environmental conditions differing from those in the contiguous 48 States and the District of Columbia as defined in 5 U.S.C. 5925, this code is for the costs above the basic rate for service at hardship posts abroad.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, AMCOS computes an average “weighted” cost by dividing the total reported cost by the total reported inventory count for the same selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

Civ Post Differential Pay (6100.11J0) = [Average cost based on user selections which sum the Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11J0 for this cost element.

AVG COST OF CIV SUPERVISORY SPECIAL PAY (6100.11Q0)

Description

Annualize the GFEBS reported Civilian Supervisory Special Pay (6100.11Q0) in EOR Code 6100.11Q0. This is the supervisory differential cost.

Business Logic

Initially derive an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, AMCOS computes an average “weighted” cost by dividing the total reported cost by the total reported inventory count for the same selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

Civ Supervisory Special Pay (6100.11Q0) = [Average cost based on user selections which sum the Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to] divided by the (Total reported inventory count for that same level)].

Source

 GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.11Q0 for this cost element.

AVG COST OF HOLIDAY PAY

Description

Calculate the GS Avg Cost of Holiday Pay by multiplying the current Holiday Pay Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11EB, 14EB, and 16EB. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalent is 6100.11E0.

Business Logic

Calculate by multiplying the current Holiday Pay Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

Basis of Computation

Displayed GS Value:

$$\text{Avg Cost of Holiday Pay} = [\text{Avg Cost of Base Pay (Civilian) including Locality Pay}] * [\text{Holiday Pay Load Factor Percentage}].$$

Source

 DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF OTHER COMPENSATION

Description

Calculate the Avg Cost of Other Compensation by multiplying the current Other Compensation Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade.

 Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11CB, 11FB, 11GB, 11HB, 11JB, 11LB, 11NB, 11QB, 11RB, 11TB, 11UB, 14CB, 14FB, 14GB, 14HB, 14JB, 14LB, 14NB, 14QB, 14RB, and 14TB. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.11C1 [Terminal Leave], 6100.11F0 [Sunday Pay], 6100.11G0 [Night Differential], 6100.11H0 [Hazardous Duty], 6100.11J0 [Post Differential], 6100.11L0 [Other Premium Pay], 6100.11N0 [Title 38 Medical Premium Pay], 6100.11Q0 [Supervisory Special Pay], 6100.11R0 [Remote Worksite], 6100.11T0 [Physicians], 6100.11UB [Foreign Language], and, 6100.11C3 [Terminal Leave]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Other Compensation Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

Basis of Computation

Displayed GS Value:

Avg Cost of Other Compensation = [Avg Cost of Base Pay (Civilian) including Locality Pay] * [Other Compensation Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINs (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF PREMIUM PAY

Description

The Wage Board (WB) Avg Cost of Premium Pay cost factor includes Civilian Overtime Pay, Civilian Holiday Pay, Civilian Sunday Pay, Civilian Night Differential Pay, Civilian Other Premium Pay, Civilian Remote Work Site Allowance, Civilian Post Differential Pay, Civilian Hazardous Duty Pay, and Civilian Terminal Leave Pay. Calculate the WG cost by multiplying the current Premium Pay Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11CC, 11DC, 11EC, 11FC, 11HC, 11JC, 11LC, 11RC, 14CC, 14DC, 14EC, 14FC, 14HC, 14JC, 16CC, 16DC, 16EC, and 16FC. The WB Premium Pay EORS are 11DC, 14DC, 16DC, 28DC, 11FC, 14FC, 16FC, 11EC, 14EC, 16EC, 11LC, 14LC, 16LC, 11GC, 14GC, 16GC, 11RC, 14RC, 16RC, 11JC, 14JC, 16JC, 11HC, 14HC, 16HC, 11CC, 14CC, and 16CC. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6100.11C1, 6100.11D0, 6100.11EC, 6100.11F0, 6100.11H0, 6100.11J0 6100.11G0, 6100.11L0, 6100.11.T0, 6100.11R0, 6100.11C3, and 6100.11E0. Sum the cost elements to obtain a total cost.

Business Logic

Calculated by multiplying the current Wage Board (WB) Premium Pay Load Factor Percentage by the civilian pay plan's weighted pay for each WB grade.

✓ Basis of Computation

Avg Cost of Premium Pay = [Avg Cost of Base Pay (Civilian)] * [WB Premium Pay Load Factor Percentage].

i Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF OVERTIME PAY

🔍 Description

Calculate the GS Avg Cost of Overtime Pay by multiplying the current Overtime Pay Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. EORs are 11DB, 14DB, & 16DB. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalent is 6100.11D0.

🧠 Business Logic

Calculate by multiplying the current Overtime Pay Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

✓ Basis of Computation

Displayed GS Value:

Avg Cost of Overtime Pay = [Avg Cost of Base Pay (Civilian) including Locality Pay] * [Overtime Pay Load Factor Percentage].

Note: for Firefighters the OT is calculated at 1 hour. This is so users may scale up the OT as needed since our research concluded that there is no 'consensus' number of OT hours the AMCOS should assume

i Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF REGULAR OVERTIME

Description

Firefighters who work 144 hours are regularly paid OT thus the cost of regular OT is calculated automatically.

Business Logic

A portion of the 144 hours are calculated at an OT rate.

Basis of Computation

Base Pay / Firefighter hours * 1.5 * Regular OT hours * 26 pay periods.

Source

<https://www.dcpas.osd.mil/Content/documents/EC/FederalFirefighterPay.pdf>

DISCOUNT GROCERIES

Description

The Full Cost of Manpower (FCOM) takes the total Defense Commissary Agency's (DeCA) Appropriation funds and divides by the Active Duty (Equivalents and Retirees) to formulate a constant cost factor used to report this cost element.

Business Logic

Discount groceries are a benefit of using DeCA run commissaries available to permitted civilians and military servicemembers.

Basis of Computation

Per the Full Cost of Manpower (FCoM) Military Rates White Paper – References, Calculations, and Assumptions, the computation is:

[FYxxxx Budget Authority; Row, Working Capital Fund Defense Commissary Agency (Total Budget Authority)] / [Retiree + Military End Strength + AGR + ADOS].

Apply cost as a constant value for all active duty pay plans and ranks; no AMCOS calculations involved.

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

CATEGORY – FORMER EMPLOYEE COMP

The cost element under this category includes:

AVG COST OF FORMER EMPLOYEE COMPENSATION

Description

Former Employee Compensation provides severance pay and separation incentives VERA and VSIP to former employees. Severance Pay information can be found under 5 U.S.C. 5595, (reference (B)). Employees are entitled to severance pay in regular pay period intervals and amounts equal to that paid before separation (DoD 7000.14-R_) VERA/VSIP incentives are paid to encourage retirement/resignation at bases that are closing or undergoing a major civilian reduction, as authorized in P.L. 102-484 (5 U.S.C 5597). This benefit is paid to the employee by the employment activity. Calculate the Wage Board (WB) Avg Cost of Former Employee Compensation by multiplying the current Former Employee Compensation WB Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables; The EORs are 13UC and 13ZC. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6400.13U0 [Civ Sev Pay Bnft] and 6400.13Z0 [VSIP/VERA]. Sum the cost elements to obtain a total cost.

Business Logic

Calculated by multiplying the current Wage Board (WB) Former Employee Compensation Load Factor Percentage by the civilian WB pay plan's weighted pay for each grade.

Basis of Computation

Avg Cost of Former Employee Compensation = [Avg Cost of Base Pay (Civilian) including Locality Pay] * [Former Employee Compensation WB Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

CATEGORY – OTHER

The cost element under this category includes:

AVG COST OF CIV OTHER BENEFITS NOT OTHERWISE CLASSIFIED (6100.12S2)

Description

GFEBS reports Civ Other Benefits not otherwise classified in GFEBS EOR Code 6100.12S2 which is for an employer's share of employee benefits not applicable to any other EOR. It includes employee retirement, health, life insurance, or other welfare benefits under special plans for non-citizen employees in foreign areas, e.g., the Social Security system of a host country Government. This EOR also includes Civilian Personnel benefit for Professional Liability Insurance payments to reimburse qualified Federal employees up to one-half of the costs incurred for Professional Liability Insurance (PLI) premiums as authorized by P.L. 104-208 and amended by P.L. 106-58. DoD will reimburse supervisors, management officials, or law enforcement officers who are eligible for PLI up to one-half the cost of a covered PLI premium, not to exceed \$150/yr. Eligibility determination authority delegates to the appropriate Command management officials.

Business Logic

AMCOS initially derives an annualized cost for every reported GFEBS position. Based on a hierarchy level selected, a user can drill costs down to Occupational Group or Series, Location, and STRL (if applicable) levels. For each level drilled down to, AMCOS computes an average "weighted" cost by dividing the total reported cost by the total reported inventory count for the same selected Occupational Group or Series, Location, and STRL (if applicable) level.

Basis of Computation

Displayed Value:

Civ Other Benefits not otherwise classified) (6100.12S2) = [Average cost based on user selections which sum the Annualized Civ costs for the level drilled down to (Occupational Group or Series, Location, and STRL (if applicable)) drilled down to]] divided by the (Total reported inventory count for that same level)].

Source

GFEBS Query - DASA-CE pulls GFEBS Element of Resource (EOR) 6100.12S2 for this acquisition cost element.

CATEGORY – OVERHEAD (CCE ONLY)

The cost element under this category includes:

AVG COST OF OVERHEAD (CCE ONLY)

Description

Ongoing business expenses not including or related to direct labor, direct materials, or third-party expenses that are billed directly to customers. Regardless of whether a Company is doing a high or low volume of business, a Company pays for overhead on an ongoing basis. It is important, not just for budgeting purposes, but for determining how much a Company must charge for its products or services to make a profit.

Business Logic

Each individual Company has its own formula when determining Overhead costs. USER SUPPLIED value based on user research of related commercial activities or contracts. The AMCOS user enters a percentage. The value range is zero – 200%.

Basis of Computation

USER SUPPLIED. The Overhead Percentage range is from zero to a maximum of 200%.

Source

USER SUPPLIED. Based on user research of related commercial activities or contracts.

CATEGORY – RETIRED PAY ACCRUAL

Under this category, the following cost element names include:

AVG COST OF ARMY-FUNDED RETIREMENT (G SERIES)

Description

The GS Avg Cost of Army-Funded Retirement is the employer's share for the Civilian Civil Service Retirement System (CSRS) and Civilian Federal Employees Retirement System (FERS) Basic Benefit Plan coverage. Calculate this cost element by multiplying the current Army-Funded Retirement Load Factor Percentage by the civilian pay plan's weighted pay to include locality rate for each grade. Determine the Load Factor Percentage by dividing the cost element's total reported GFEBS costs by the total basic pay costs. The specific reported GFEBS cost for this cost element is based on the DFAS-IN Manual 37-100, Chapter 2B-Element of Resource (EOR)-1 Tables. Sum the GS Army-Funded Retirement EORs are 12LB, 12LZ, 15LB, 15LZ, 17LB, 17LZ, 12XB, 12XZ, 15XB, 15XZ, 17XB, 17XZ, 12YB, 12YZ, 15YB, 15YZ, 17YB, and 17YZ to obtain the cost element's total reported costs. The GFEBS field used instead of EOR is Cost Element. The Cost Element equivalents are 6400.12L0 [Civ Ret CSRS] or 6400.12X0 [Civ Ret FERS] or 6100.12Y0 EmpShrFERS-TSP]. Sum the cost elements to obtain a total cost.

Business Logic

Calculate by multiplying the current Army-Funded Retirement Load Factor Percentage by the civilian GS pay plan's weighted pay for each GS grade including the Geographical Locality Pay.

Basis of Computation

Avg Cost of Army-Funded Retirement = [Avg Cost of Base Pay (Civilian) including Locality Pay] * [Army-Funded Retirement Load Factor Percentage].

Source

DASA-CE provides the Load Factor Percentage based on EOY civilian pay execution data from GFEBS combined with legacy system files, e.g. STANFINS (Selected Army Finance Information System), SOMARDS (Standard Operation & Maintenance Army Research & Development System), CEFMS II, Corps of Engineers Financial Management System). The legacy data can be obtained from DFAS Defense Finance & Accounting System) and ODS, Operational Data Store. The Civilian Pay Working Group (CPWG) uses this combined file to create the Army Civilian Pay Rates. The CPWG generates a budget and rate file. Normally, the unedited version of the budget file is used; obtain the file from the Civilian Rate Execution contractors.

AVG COST OF POST RETIREMENT HEALTH INSURANCE (ANNUAL PAY PLANS ONLY)

Description

The average cost of Post-Retirement Health Insurance is a deferred type of payment and part of an employee's compensation for services rendered. The employer incurs an obligation for that compensation as employees render the services necessary to earn their post-retirement benefits. The Full Cost of Manpower (FCOM) takes the total Government payment for annuitants Federal Employee Health Benefit (FEHB) (Object Class 13.0) and divides by the total number of FEHB annuitants to formulate a constant cost factor used to report this cost element.

Business Logic

When considering the fully burdened cost of civilian personnel for workforce-mix decisions, AMCOS includes the current FY's constant Federal Employee Health Benefit (FEHB) cost value based on the Full Cost of Manpower (FCoM) model. Based on OPM budget data and FEHB annuitants, FCOM factors provide a per capita cost for use by each civilian pay plan.

Basis of Computation

Apply cost as a constant value for the civilian pay plans and grades; no AMCOS calculations involved.

However, per the Full Cost of Manpower (FCoM) Civilian Rates White Paper – References, Calculations, and Assumptions for Federal Employee Health Benefit (FEHB), the computation is:

$$[(\text{EMPLOYEES HEALTH BENEFITS ID Code 0090 Funds})] / [\text{FEHB Annuitants}].$$

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

AVG COST OF POST RETIREMENT LIFE INSURANCE (ANNUAL PAY PLANS ONLY)

Description

The Full Cost of Manpower (FCoM) takes the total Government payment for annuitants Federal Employee Group Life Insurance (FEGLI) (Object Class 25.2) and divides by the total number of Federal Employee Health Benefit (FEHB) annuitants to formulate a constant cost factor used to report this cost element.

Business Logic

When considering the fully burdened cost of civilian personnel for workforce-mix decisions, AMCOS includes the current FY's constant Federal Employee Group Life Insurance (FEGLI) cost value based on the Full Cost of Manpower (FCoM) model. Based on OPM budget data and FEHB annuitants, FCOM factors provide a per capita cost for use by each civilian pay plan.

Basis of Computation

Apply cost as a constant value for the civilian pay plans and grades; no AMCOS calculations involved.

However, per the Full Cost of Manpower (FCoM) Civilian Rates White Paper – References, Calculations, and Assumptions for Federal Employee Life Insurance Benefit (FELI), the computation is:

$$[(\text{EMPLOYEES LIFE INSURANCE BENEFIT Funds})] / [\text{FEHB Annuitants}].$$

Source

The Full Cost of Manpower (FCoM) link is <https://fcom.cape.osd.mil/> - See Supporting Links, Reference Library.

CATEGORY – TRAINING COSTS

The cost element under this category includes:

AVG COST OF TRAINING (ANNUAL PAY PLANS ONLY)

Description

The training costs in this category cover education costs for civilian's education preparing individuals for increasingly complex tasks that progress during their careers or for maintaining skills of civilian employees. The cost includes to, during, and from training travel costs, costs of tuition, and costs for books or supplies needed for the training. This cost captures the annual average training cost for civilians. AMCOS presently obtains the cost from the Full Cost of Manpower (FCoM) model and reports the cost as a constant.

Business Logic

FCoM derives the civilian training cost by pulling SAG 334 Civilian Education and Training costs and divides by the Total Number of Army Civilian U.S. Direct Hire population to formulate a constant cost factor used to report this cost element.

Basis of Computation

Apply cost as a constant value for all civilian pay plans and grades; no AMCOS calculations involved.

However, per the FCoM Civilian Rates White Paper – References, Calculations, and Assumptions for Federal Employee Life Insurance Benefit (FELI), the computation is:

[FY2016 Army Total Civilian Education and Training] / Army U.S. Direct Hire Population.

Source

ATTACHMENT 2 – CIVILIAN PERCENTAGE CALCULATIONS

In the civilian portion of AMCOS Lite and AMCOS Project Manager, the AMCOS team calculates most of the non-base pay costs by determining what percentage they are of base pay. To see the list of cost elements derived in this manner see Figures 1-3 below.

General Schedule (GS) Cost Elements	
	<i>Default Summary</i>
1	Avg Cost of Other Compensation
2	Avg Cost of Benefits
3	Avg Cost of Former Employee Compensation+Separation+Severance
4	Avg Cost of Cash Awards
5	Avg Cost of Holiday Pay
6	Avg Cost of Overtime Pay
	<i>Additional Elements Not Used</i>
1	Life Insurance (included in Avg Cost of Benefits above)
2	Army Funded Retirement (included in Avg Cost of Benefits above)

Figure 1

Wage Board Cost Elements	
	<i>Default Summary</i>
1	Avg Cost of Premium Pay
2	Avg Annualized Cost of FICA
3	Avg Cost of Army-Funded Retirement
4	Avg Cost of Federal Employee Gov't Life Insurance
5	Avg Cost of Miscellaneous Pay
6	Avg Cost of Cash Awards
7	Avg Cost of Former Employee Compensation+Separation+Severance

Figure 2

SES Cost Elements	
	<i>Default Summary</i>
1	Avg Cost of Army Funded Retirement
2	Avg Cost of Federal Employees Life Insurance
3	Avg Cost of FICA
4	Avg Cost of Cash Awards

Figure 3

The AMCOS team uses execution data to calculate the percentages for the cost elements above. There are several types of execution data. DASA-CE derives the AMCOS civilian percentages from the end of year, civilian pay, budget execution data. The data is combined from several financial legacy systems (STANFINS, SOMARDS, CEFMs) and GFEBS. This file is the same one the Civilian Pay Working Group created to make the Army Civilian Pay Rates sometimes called (CEAC Rates). The AMCOS civilian percentages require the combined file prior to deletions. We obtain the file from the Civilian Rate Execution contractors.

There is an Access Database from the year before with the execution data in a table and multiple queries providing the cost elements needed. Last Year's is "FY2022 AMCOS Benefits". We will rename the file to call it FY2023 AMCOS Benefits. We receive new execution data for FY22 (the execution data is for the year prior) in another access database. If the fields of the old access source table are "exactly" like the fields in the new source table, you can switch out the source tables. First, we import the ActualExecutionSum table from the Access database it's in, into the FY23 AMCOS Benefits Access database. Then, we deleted the existing source table called ActualExecution. Next, we rename the new source table ActualExecution instead of ActualExecutionSum. If this goes well, all the old queries will run. If something went wrong they won't. Please see Figure 4.

Figure 4

The database crosswalks the GFEBS cost elements to the AMCOS cost elements. For example, AMCOS GS Cash Awards crosswalks to GFEBS cost elements 6100.11K0 and 6100.11S0. If the fields are not the same, I have to redo the database. I redid the database when we went to a GFEBS format and one year when the fields changed. This year, I was able to reuse the Microsoft Access database from the prior year.

The team uses the query results in the database to fill in three Excel load sheets: (1) Civilian SES Single Values FY2023.xlsx, (2) Civilian Wage Single Values FY2023.xlsx, and (3) Civilian GS Single Values FY2023.xlsx. Figure 5 provides an example of the Civilian GS Single Value Spreadsheet for FY2023.

FY2023 Spring Update			
GS			
Basic Pay			
Holiday Pay	\$13,459,547.66	0.134802%	Divide Holiday Pay \$\$ by Base Pay \$\$
Other Comp	\$262,885,608.85	2.632889%	Divide Other Comp \$\$ by Base Pay \$\$
Other Comp No Premium Pay for Firefighters	\$234,989,779.51	2.353503%	Divide Other Comp \$\$ by Base Pay \$\$
Overtime	\$179,865,867.37	1.801418%	Divide Overtime \$\$ by Base Pay \$\$
Avg Cost of Benefits No OCONUS No FICA	\$3,098,920,829.99	31.036751%	Divide Avg Cost of Benefit \$\$ by Base Pay \$\$
Cash Awards	\$189,367,564.53	1.896581%	Divide Cash Award \$\$ by Base Pay \$\$
Former Comp	\$11,899,565.81	0.119178%	Divide Former Comp \$\$ by Base Pay \$\$
Former Comp + Separation + Severance	\$12,344,356.35	0.123633%	Divide Former Comp+Separation+Severance \$\$ by Base Pay \$\$
Life Insurance	\$20,830,355.65	0.208623%	Divide Life Insurance \$\$ by Base Pay \$\$
Army Funded Retirement	\$2,181,131,768.86	21.844780%	Divide Army Funded Retirement \$\$ by Base Pay \$\$
FICA	\$746,863,948.61	7.480098%	Divide FICA \$\$ by Base Pay \$\$

Figure 5

Once inside the spreadsheet, copy the previous year's data and paste it above the old data. Delete the information in the white section and replace it with the query results from the database. So that we can copy the formulas down easily, we use absolute references when referring to the base pay. This can cause errors if we forget to change all the formulas when we copy and paste the previous year's data. Be sure the formulas referencing the new base pay and not the old one. The team adds notes about any discrepancies or strange issues encountered to the right of the cost element.
